

Annual Report 2009

SHAPING THE FUTURE

Hydro-Québec generates, transmits and distributes electricity. Its sole shareholder is the Québec government. It uses mainly renewable generating options, in particular hydropower, and supports the development of wind energy through purchases from independent power producers. It also conducts R&D in energy-related fields, including energy efficiency. The company has four divisions:

Hydro-Québec Production generates power for the Québec market and sells its surpluses on wholesale markets. It is also active in arbitraging and purchase/resale transactions.

Hydro-Québec TransÉnergie operates the most extensive transmission system in North America for the benefit of customers inside and outside Québec.

Hydro-Québec Distribution provides Quebecers with a reliable supply of electricity. To meet needs beyond the annual heritage pool which Hydro-Québec Production is obligated to supply at a fixed price, it mainly uses a tendering process. It also encourages its customers to make efficient use of electricity.

Hydro-Québec Équipement and Société d'énergie de la Baie James (SEBJ), a subsidiary of Hydro-Québec, design, build and refurbish generation and transmission facilities, mainly for Hydro-Québec Production and Hydro-Québec TransÉnergie.

On the cover:
Installing a draft tube cone at the Sarcelle powerhouse jobsite (Baie-James).

Opposite:
Reservoir and spillway of the Robert-Bourassa development in the La Grande complex. Output from this complex will increase by 5.3 TWh with the added flow from the Rupert diversion, which went into operation in fall 2009.

Hydro-Québec's primary mission is to ensure the long-term supply of electric power in Québec. That is why we are continuing to develop our hydropower fleet, as demonstrated by our Eastmain-1-A/Sarcelle/Rupert project and the more recent Romaine project. It's also why we are integrating a large volume of wind power into our transmission system. These renewables, combined with our ongoing efforts in energy efficiency, form the basis of energy security in Québec. They also enable us to continue developing our export markets and to pave the way for a sustainable future through ground transportation electrification.

	2009	2008
Operations and Dividends (\$M)		
Revenue	12,334	12,717
Operating income	5,434	5,457
Income from continuing operations	3,035	3,012

Income from Continuing Operations

Income from continuing operations totaled \$3,035 million, a \$23-million increase from the \$3,012 million in 2008, despite a difficult business environment in 2009. Active management of market risks enabled us to limit the impact of the drop in energy and aluminum prices that occurred in 2009.

Revenue and Net Income by Segment

Total Assets by Segment

MESSAGE FROM THE CHAIRMAN OF THE BOARD

At the summer 2009 peak of construction on Eastmain-1-A powerhouse in the Baie-James region, the Eastmain workcamp housed 1,046 workers, 13% of whom came from Cree and other local communities.

FORWARD-LOOKING DECISIONS

"Hydro-Québec is a driving force in the Québec economy and a leader in sustainable development."

Hydro-Québec performed well in all its areas of operation in 2009, while pursuing its work to create value from Québec's energy resources. Among our many other accomplishments, we strengthened our generating capacity, extended the transmission system, and distributed and exported high-quality electricity. Through the company's actions and strategic choices, we continued to play a leading role in boosting Québec's economy and meeting ambitious goals for sustainable development.

The Board of Directors maintained its oversight of the many facets of Hydro-Québec's ongoing activities, with a particular focus on such key issues as the development of hydroelectric resources, long-term operability of generation, transmission and distribution facilities, human resources and continuous improvement of customer services.

In 2009, the Board approved Hydro-Québec's *Strategic Plan 2009–2013*, which was published in July. It authorized the start-up of construction on the Romaine complex and the extension of the transmission system in northeastern Québec in preparation for bringing this new output onto the grid.

In addition to the Chairman of the Board and the President and Chief Executive Officer, the Board currently comprises 14 members with diverse backgrounds, who are active on seven committees. The directors exercise a wide range of responsibilities, which include advising Management as it decides on and works toward Hydro-Québec's strategic objectives, ensuring the sound management and profitability of the company, approving major infrastructure projects, and seeing that they are completed on budget and in compliance with the objectives of sustainable development.

I wish to express my gratitude to all the directors, and in particular to Nathalie Le Prohon and Normand Bergeron, who left the Board in 2009. I would like to take this opportunity to welcome two new members: Michelle Cormier and Robert Sauvé. I am also grateful to Management and to all Hydro-Québec employees for their unfailing commitment and their contribution to the company's strong performance.

A handwritten signature in black ink, appearing to read 'M. Turcotte', with a stylized flourish at the end.

Michael L. Turcotte
Chairman of the Board

ROBUST RESULTS

In 2009, Hydro-Québec once again posted a very solid performance, as its financial results demonstrate. Income from continuing operations totaled \$3,035 million, up \$23 million from 2008—a new record for the company. Dividends paid to our shareholder, the Québec government, will amount to \$2.2 billion.

Our performance is mainly the product of careful management of our operating expenses, which have remained stable since 2007 in a context marked by rapid growth in operations. In other words, we have been able to absorb all costs associated with our new facilities, as well as general inflation and salary indexation. Our employees' commitment has been a crucial factor in this remarkable achievement.

These robust results are also attributable to effective management of risks such as the appreciation of the Canadian dollar, the decline in energy prices on markets outside Québec and the drop in the price of aluminum, which affected revenue from electricity sales to smelters in the province. This prudent approach allowed us to limit the effect of the difficult economic conditions prevailing on all of our markets, especially the decrease in industrial demand in Québec during the year.

TAPPING QUÉBEC'S ENERGY POTENTIAL

Several major milestones were reached in 2009 in our development of Québec's hydroelectric potential. First, the Rupert diversion went into operation. This facility will add 5.3 TWh—5,300 million kilowatt-hours—to the annual output of the La Grande complex in the Baie-James region. Next, we signed a partnering agreement with the Innu community of Ekuanitshit regarding the Romaine complex in Minganie; this agreement followed in the wake of the agreements entered into in 2008 with the communities of Nutashkuan, Unamen Shipu and Pakua Shipi. After securing the necessary government approvals for this \$6.5-billion project, we broke ground at the site in May. And finally, draft-design studies for the Petit-Mécatina complex (Basse-Côte-Nord) got under way in the fall.

A TOP-QUALITY SYSTEM

Hydro-Québec operates the most extensive transmission system in North America. In 2009, we invested \$1.2 billion in expanding and reinforcing this infrastructure, mainly in order to ensure the long-term operability of our facilities, integrate new hydropower and wind farm output, and bolster the capacity of a number of substations. We also increased transmission capacity to neighboring systems with the commissioning of a 1,250-MW interconnection with Ontario.

A SUSTAINABLE POWER SUPPLY

In 2009, we issued two tender calls and initiated a purchasing program for Québec-generated renewable energies. The first call was for the purchase of 125 MW of electricity produced by new biomass cogeneration facilities. The second covers the purchase of two 250-MW blocks of wind power: one reserved for Aboriginal projects and one for other community projects. The purchasing program targets small hydro (plants of 50 MW or less), for a total capacity of 150 MW.

ENERGY EFFICIENCY: A MAJOR OBJECTIVE

While maintaining our target of 11 TWh in energy savings by 2015, we adapted our energy efficiency efforts to better meet the expectations of our different customer categories. New savings amounted to 946 GWh in 2009, for a total of 4.3 TWh of annual savings achieved under our initiatives in this regard. In April, our ENERGY WISE Home Diagnostic program achieved a milestone with more than one million personalized recommendation reports sent out.

“Effective management of risks and operating expenses, combined with the steadfast commitment of all our employees, allowed us to perform extremely well despite a difficult economy.”

A RECORD VOLUME OF ACTIVITY ON OUR JOBSITES

Our many infrastructure projects represented a volume of activity of \$2.7 billion for Hydro-Québec Équipement and Société d'énergie de la Baie James in 2009—an 11% increase over the previous year. Notable generation projects included the launch of construction on the Romaine complex, start-up of the Rupert diversion and completion of Chute-Allard and Rapides-des-Cœurs generating stations (Mauricie), while work on Eastmain-1-A and Sarcelle powerhouses (Baie-James) continued to make steady progress. In the transmission sector, we commissioned Outaouais substation, the linchpin in the 1,250-MW interconnection with Ontario, as well as Mont-Tremblant (Laurentides) and Vaudreuil-Soulanges (Montérégie) substations.

INNOVATION, A VITAL COMPONENT OF OUR GROWTH

Technological innovation plays an important role in all our areas of activity. It translates into substantial productivity gains, which contribute directly to the continuing improvement in our operating performance, and innovative maintenance strategies that ensure the smooth operation of our facilities and extend their service lives. The calibre of our research institute personnel is a key factor in these successes. As well, the skill of our computer specialists and telecommunications experts means that our customers benefit from the most advanced information and communication technologies available.

Electricity will become a driving force in ground transportation. To help reduce Québec's greenhouse gas emissions, we have drawn up an action plan for the electrification of public and personal transportation. This plan is intended to ensure that Hydro-Québec remains at the forefront of both electrical infrastructure and automotive technologies.

A STEADFAST COMMITMENT

I cannot say often enough how critical our employees are to the company's accomplishments. Our performance is directly proportional to the commitment shown by these energetic women and men who work, every day and in every region of the province, to provide Quebecers with reliable, high-quality electricity. On behalf of Management, I thank them all very sincerely for their indispensable contribution.

In closing, I would also like to thank the members of the Board of Directors for their dedication to the success of Hydro-Québec.

Thierry Vandal

President and Chief Executive Officer

Work under way at Manic-2 generating station in the Manicouagan region will add approximately 30 MW in capacity by 2013.

CAREFUL MANAGEMENT ON ALL FRONTS

*We owe our success
to the commitment,
skill and know-how
of our employees.*

Richard Cacchione
President, Hydro-Québec Production

Hydro-Québec Production posted an outstanding performance in 2009. Our success can be credited to two main factors: our employees' commitment to our objectives and careful management that continues to prove its worth. Development of Québec's hydropower potential reached an important milestone with the start-up of the Rupert diversion, which will add 5.3 TWh to the annual output of the La Grande complex. We also commissioned the last units at Chute-Allard and Rapides-des-Cœurs generating stations and finished refitting Outardes-4. In addition, after obtaining the necessary government approvals for the Romaine complex, we broke ground on the \$6.5-billion project in May. Finally, we launched draft-design studies for two generating stations to be built on the Petit Mécatina.

We recorded net income of \$2,214 million and paid \$573 million in water-power royalties. Under unusually difficult market conditions, our net exports totaled \$1,258 million for 18.5 TWh. Reservoir storage stood at 112.9 TWh as at December 31, 2009, a level well within the criteria set for managing the risks associated with security of energy supply.

OUR MISSION

Hydro-Québec Production generates electricity to supply the domestic market and sells its excess output on wholesale markets. We also offer balancing and firming capacity services to Hydro-Québec Distribution to offset variations in wind farm output and thereby facilitate the integration of this energy source.

OUR FACILITIES

Our generating fleet comprises 59 hydro-electric generating stations, 1 nuclear generating station, 4 thermal generating stations and 1 wind farm, representing assets worth \$28.2 billion and installed capacity of 36.7 GW. We also have 26 large reservoirs with a storage capacity of 175 TWh, and 571 dams and control structures.

OUR ACTIVITIES

We supply Hydro-Québec Distribution with a heritage pool of 165 TWh of electricity per year. Above this volume, we sell our output in Québec in response to tender calls by Hydro-Québec Distribution and outside Québec on wholesale markets in northeastern North America.

2009 IN FIGURES

Revenue	\$6.4 billion
Net income	\$2.2 billion
Customers (% of revenue from electricity sales)	
Hydro-Québec Distribution	76%
Other	24%
Sales volume	
Hydro-Québec Distribution	164.2 TWh
Other	23.2 TWh
Property, plant and equipment as at December 31 (including work in progress)	\$31.8 billion
Investments	
Property, plant and equipment and intangible assets	\$2.1 billion
Ownership interest (McCormick generating station)	\$0.6 billion

Hydro-Québec Production's Net Electricity Exports

Hydro-Québec Production's Net Electricity Sales and Income, by Market

MAKING THE MOST OF OUR ENERGY RESOURCES

With its sustained focus on efficiency, Hydro-Québec Production is working to optimize its generating capacity in order to meet domestic requirements while maximizing profitability. The flexibility offered by hydroelectric generating stations, which can be started up in the space of a few minutes if necessary, means that our electricity can be sold on wholesale markets throughout northeastern North America under the best possible conditions.

- > Electricity sales to Hydro-Québec Distribution totaled 164.2 TWh in 2009, compared with 170.2 TWh in 2008. Heritage pool sales generated net income of \$1,488 million. Other deliveries and business transactions yielded net income of \$54 million.
- > Electricity sales outside Québec brought in \$1,495 million for 23.0 TWh, versus \$1,897 million for 21.1 TWh in 2008. The decrease in revenue is attributable to the more difficult market conditions encountered in 2009, compared with the highly favorable conditions seen during the first seven months of 2008. Net exports amounted to \$1,258 million for net reservoir drawdown of 18.5 TWh—a unit contribution of 6.8¢/kWh—compared with \$1,484 million and drawdown of 15.2 TWh in 2008. Net exports, less generating, procurement and transmission costs, yielded net income of \$672 million in 2009.
- > We operate our facilities in such a way as to maintain a sufficient energy reserve at all times to offset a potential natural inflow deficit equivalent to 64 TWh over two consecutive years and 98 TWh over four consecutive years. We also keep a capacity reserve approximately 8% higher than our contractual commitments, in line with the industry's reliability criteria.
- > Under an agreement signed in 2006, we offer Hydro-Québec Distribution two services to facilitate the integration of wind power supplied by private producers: a balancing service to mitigate the impact of hourly fluctuations in the quantity of wind power carried on the Hydro-Québec TransÉnergie system; and firming capacity equivalent to 35% of the contractual capacity of the wind farms in commercial operation. The terms of this agreement will be renegotiated when it expires in 2011, according to the wind farms' actual output.

In 2009, net exports by Hydro-Québec Production accounted for only 10% of sales volume, but generated 30% of the division's net income and 22% of the company's net income.

The average cost of a kilowatt-hour was 2.0¢. This corresponds to the sum of our generating, procurement and sales costs divided by the net sales volume.

Continuing to develop hydropower, a clean, renewable energy source, will allow us to meet the energy needs of future generations.

In December, Hydro-Québec became the co-owner of McCormick generating station (Côte-Nord).

The last five generating units at Rapides-des-Cœurs, in the Mauricie region, came on stream in 2009.

DEVELOPING OUR GENERATING FLEET

Under its continuing program to develop Québec's hydropower potential, Hydro-Québec Production has inaugurated a number of facilities in the past few years: Sainte-Marguerite-3 and Rocher-de-Grand-Mère generating stations in 2004, Toulnostouc in 2005, Eastmain-1 in 2006, Mercier in 2007, Péribonka in 2008, and Chute-Allard, Rapides-des-Cœurs and the Rupert diversion in 2009. All our development projects must meet three fundamental criteria before they can proceed: they must be profitable, environmentally acceptable and favorably received by the local populations concerned.

- > In December, the division invested \$0.6 billion in Hydro-Québec's acquisition of a 60% interest in Manicouagan Power Limited Partnership, which owns and operates the 335-MW McCormick generating station in the Côte-Nord region.
- > Commissioning of Chute-Allard and Rapides-des-Cœurs generating stations, on the Saint-Maurice, was completed in the fall. The first four units were started up in 2008, followed by the remaining eight in 2009: three at Chute-Allard and five at Rapides-des-Cœurs. With a combined installed capacity of 138 MW, the two facilities will generate 0.9 TWh per year for a total investment of \$1.0 billion.

- > The Eastmain-1-A/Sarcelle/Rupert project (Baie-James) reached a major milestone when the Rupert diversion went into operation in fall 2009, two months ahead of schedule and below budget. Construction also proceeded on Eastmain-1-A and Sarcelle powerhouses, to be commissioned in 2011 and 2012, respectively. This project, which will cost \$5.0 billion to build, will add a total of 918 MW in installed capacity and 8.7 TWh in annual output, including additional output (5.3 TWh) stemming from the diversion of part of the flow of the Rupert to the La Grande complex.
- > After we signed partnering agreements with Innu and other local communities affected by the project and obtained the necessary government approvals, we broke ground on the Romaine complex in May. The \$6.5-billion project calls for the construction of four generating stations with a total capacity of 1,550 MW and annual output of 8.0 TWh on the Romaine, north of Havre-Saint-Pierre, in the Minganie region. The facilities will be commissioned in stages between 2014 and 2020.
- > In the fall, we launched draft-design studies for two generating stations to be built on the Petit Mécatina, in the Basse-Côte-Nord region, about 250 km east of the Romaine. This complex would have a capacity of 1,200 MW and output of 6.2 TWh.

In the Manicouagan region, refitting was completed at Outardes-4.

Visitors tour the machine hall of Robert-Bourassa generating station (Baie-James). Based on the results of an innovative project for modeling head losses in the surge chamber, we modified the start-up sequence of the 16 generating units to achieve significant gains in output.

MAINTAINING AND UPGRADING OUR FACILITIES

In 2009, Hydro-Québec Production invested \$644 million to ensure the long-term operability of its assets and increase their generating capacity. This calls for a detailed assessment of the condition of each facility, which is appraised by highly specialized employees.

- > In the Manicouagan region, we finished the refitting of Outardes-4 generating station and began rehabilitation of a unit at Manic-2. The latter project, slated for completion in 2013, will yield additional capacity of around 30 MW.
- > In the same region, auxiliary equipment at Manic-1 and the spherical valves at Manic-5 are undergoing a major overhaul to ensure their long-term reliability. These two projects should be completed by 2012 and 2013, respectively.
- > In the Mauricie region, phase II of the La Tuque rehabilitation and refitting concluded with the commissioning of the third and final unit. This project added 60 MW to the facility's peak capacity.
- > Rehabilitation at Beauharnois generating station (Montréal) is proceeding as scheduled. This large-scale undertaking will considerably increase annual output.
- > Several projects to ensure the long-term operability of Paugan generating station, in the Outaouais region, are under way.
- > In Montréal, rehabilitation continued at Rivière-des-Prairies generating station.
- > Rehabilitation was completed at Barrière dam (Abitibi-Témiscamingue) and Mercier dam (Outaouais), and is ongoing at Bourque dam (Outaouais), Melville dam (Mauricie), and Coteau-1, Coteau-3, Île-Juillet-1 and Île-Juillet-2 dams (Montréal).
- > As part of the project to refurbish Gentilly-2 nuclear generating station (Centre-du-Québec), we continued the engineering, procurement and planning activities begun in 2008. At the same time, we launched phase II of the project to build solid radioactive waste management facilities to store the waste generated by the plant's refurbishment. This work is scheduled for completion in summer 2010.

We use water to generate 98% of our output.

The 65 generating stations operated by Hydro-Québec Production have a total installed capacity of 36.7 GW.

Technician Mélanie Paquette takes monitoring measurements on Beauharnois dam (Montérégie).

Étienne Bergeron, powerhouse mechanic, and Pierre Deslauriers, mechanical technician, at the Gatineau mechanical workshop, which serves facilities in the Outaouais region.

INNOVATING TO IMPROVE OUTPUT

Our technological innovation efforts have essentially one objective: to optimize our generating assets in order to improve our performance on every level, always with a view to sustainability. Our innovation undertakings in 2009 were part of a portfolio of 25 projects worth a total of nearly \$20 million.

- > In light of a project initiated and carried out with the Hydro-Québec research institute (IREQ), which involved the numerical modeling of head losses in the surge chamber at Robert-Bourassa generating station using the finite element method, we modified the start-up sequence of the plant's 16 units. According to our estimates, this change should yield additional output of about 9 GWh/year.
- > Using MATH technology (MATH is short for *modèles d'analyse des turbines hydrauliques*, or hydraulic turbine analysis models), we studied the wicket gates of three units at Beauharnois generating station and suggested altering their profile. This would enhance their efficiency and help reduce losses at the junction between the runners and the stationary part of the turbines.

- > We continued to work with university and industry partners on a number of new technologies. These include LIBAR, which is a set of tools and technologies being developed to detect water infiltration in dams, and a project to demonstrate the feasibility and performance of a waterproof membrane for new or existing retaining structures.
- > Finally, we embarked on a project to reduce the impact of hydroelectric developments on aquatic species through the installation of noise barriers (infrasound and ultrasound) to guide fish in their migration downstream.

Pierre Caron, Raphaël Gignac and Daniel Dufour of Installations de transport – Outaouais-Abitibi were involved in the start-up of the converters in the Outaouais substation valve room.

SOLUTIONS TO HANDLE THE CHALLENGES AHEAD

Thanks to our highly competent employees, we offer reliable transmission service meeting the most stringent quality standards.

Isabelle Courville
President, Hydro-Québec TransÉnergie

In 2009, we invested \$1.2 billion in transmission grid development, reliability and long-term operability in order to continue to meet customer requirements in the areas of power quality and continuity of service.

We added to regional transmission facilities in order to integrate new sources of hydropower and wind power, and expanded our capacity over interconnections with neighboring systems by about 15%.

We do our utmost to keep our grid a globally recognized benchmark for reliability. System reliability is gauged by a continuity index, the system average interruption duration index (SAIDI). Based on third-party benchmarking, the SAIDI of the Hydro-Québec system compares favorably with that of other utilities.

To ensure system operation in compliance with the most stringent reliability standards, a mission with many highly technical challenges, we rely on our staff of extremely qualified specialists. Because maintaining this knowledge capital is critically important, we are actively preparing for successors in all job categories and carefully managing the transfer of knowledge. We are also aligning our work methods and processes with industry best practices.

OUR MISSION

Hydro-Québec TransÉnergie operates the most extensive transmission system in North America, marketing system capacity and managing power flows across Québec. Our Direction du contrôle des mouvements d'énergie acts as Reliability Coordinator for transmission systems in Québec.

OUR FACILITIES

Our system comprises 33,244 km of lines and 515 substations, as well as interconnections for interchanging electricity with grids in the Atlantic provinces, Ontario and the U.S. Northeast. Our rates and conditions of service, approved by the Régie de l'énergie, ensure non-discriminatory access to our system, in compliance with North American regulatory provisions.

OUR ACTIVITIES

To meet evolving customer needs and ensure high-quality transmission service, Hydro-Québec TransÉnergie works diligently to ensure the development, reliability and long-term operability of its system. With a view to continuously improving its performance, the division also focuses particular attention on developing its expertise.

2009 IN FIGURES

Revenue	\$2.9 billion
Net income	\$435 million
Customers (% of revenue)	
Hydro-Québec Distribution (native-load transmission service)	88%
North American wholesalers (point-to-point transmission services)	9%
Other	3%
Property, plant and equipment as at December 31 (including work in progress)	\$16.9 billion
Investments	
Property, plant and equipment and intangible assets	\$1.2 billion

Papineau MNA Norman MacMillan, Québec Premier Jean Charest, Québec Deputy Premier and Minister of Natural Resources and Wildlife Nathalie Normandeau, and Hydro-Québec President and CEO Thierry Vandal at the inauguration of Outaouais substation.

At the Saint-Hubert remote maintenance centre (Montérégie), Stéphane Després, Denis Nadeau, Éric Loiselle and Gaston Bazinet (foreground) work on deploying new technology to automate maintenance and to manage remote monitoring data as part of the IMAGINE project, with the ultimate goal of optimizing power system maintenance.

DEVELOPING THE TRANSMISSION SYSTEM

In 2009, we invested \$493 million in the system in order to meet growing needs for the transmission of electricity. Our achievements include the commissioning of a 1,250-MW interconnection with Ontario, enabling us to send more power to that province and onward to New York State and the U.S. Midwest. We also continued discussions with U.S. transmission providers on building a 1,200-MW interconnection with New England. At the same time, we extended and strengthened the system to integrate new hydropower and wind power facilities. We have also built or upgraded a number of substations to meet increasing local demand.

- > In the Gaspésie and Bas-Saint-Laurent regions, with the aim of integrating the 990 MW of wind power to be purchased by Hydro-Québec Distribution subsequent to tendering in 2003, we achieved the following milestones:
 - Commissioning of the 230-kV Rimouski–Les Boules line (63 km)
 - Commissioning of the 230-kV Saint-Ulric–Saint-Léandre line (7 km) and integration of the wind farm there
 - Start of construction of the 230-kV Goémon–Mont-Louis–Gros-Morne line (106 km), a \$142-million project to be completed in 2011
- > We commissioned the first two components of the 1,250-MW interconnection with Ontario: Outaouais converter substation and the 230-kV line linking it to the Ontario grid. To reinforce Outaouais substation and improve security of supply to the region, we began building the 315-kV Chénier–Outaouais line (115 km), to be completed in 2010.

- > We completed construction of the 120/25-kV Mont-Tremblant substation and two 120-kV lines 14 km long (Laurentides).
- > We finished building the 120/25-kV Vaudreuil-Soulanges substation and looping the Dorion–Rigaud line connecting it to the grid, at a total cost of \$26 million (Montérégie).
- > In Montréal, we finished expanding the 315/25-kV Saraguay substation, a \$30-million project.
- > We began clearing the right-of-way for a 102-km, 315-kV line to link Eastmain-1-A and Sarcelle powerhouses to the system in 2011 (Baie-James).
- > We launched construction of the 161/25-kV Waconichi substation and a 161-kV line (46 km), a \$36-million project slated for completion in 2011 (Baie-James).
- > In response to requests for transmission service to New Hampshire, Hydro-Québec and Northeast Utilities Service Company, a major New England transmission provider, signed a letter of understanding in 2008 for a project to build a 1,200-MW DC line between Des Cantons substation and a substation yet to be determined in southern New Hampshire. Discussions and studies by both parties continued in 2009. A milestone was reached in May when the Federal Energy Regulatory Commission (FERC) approved the commercial structure of the U.S. portion of the project.

Installing interphase spacers on the Eastmain-1–Nemiscau line (Baie-James) to maintain a constant distance between conductors and to counteract transmission line galloping.

At the Madawaska overhaul shop (Bas-Saint-Laurent), power system electrician Yves Olivier Ménard inspects a circuit breaker support column.

- > We began clearing operations in preparation for building a 120-kV line 19 km long to supply the Canadian Malartic mining facilities of Osisko Mining Corporation (Abitibi-Témiscamingue). The line is to be commissioned in 2010 at an estimated cost of \$16 million.
- > A \$76-million project is under way in Laval to increase the capacity of the 315/120-kV Chomedey substation and to replace equipment there by 2013.
- > Near the city of Québec, we have undertaken construction of the 315/25-kV Anne-Hébert substation and a 315-kV line 13 km long (Capitale-Nationale). The project is expected to cost \$84 million and end in 2010.
- > In March, the Régie de l'énergie authorized our 2009 budget for projects of less than \$25 million, including ones related to telecommunication facilities associated with the transmission system. Totalling \$718 million, the budget is used to keep assets in good operating condition, improve the quality of service, meet legal and regulatory requirements, and respond to growing needs.
- > In August, the Régie authorized a project running until 2012 to upgrade the main transmission system. The project involves increasing transmission capacity and improving power quality by adding

static var compensators and series compensation, replacing circuit breakers, modifying protections and performing various jobs on related equipment and on the telecommunication network.

RELIABILITY AND LONG-TERM OPERABILITY

To provide high-quality electrical service throughout the province, we must safeguard the reliability and long-term operability of the transmission system. In 2009, we spent \$703 million on refurbishment, upgrading and modernization projects designed to meet customer requirements and to ensure system reliability and compliance with standards and regulatory requirements.

- > In June, our Direction du contrôle des mouvements d'énergie, in its capacity as Reliability Coordinator for Québec, filed with the Régie de l'énergie the North American Electric Reliability Corporation (NERC) standards that will apply to power systems in Québec under the North America-wide framework of mandatory standards. The Régie filing also included an assessment of the pertinence and impact of these standards, registers of entities and facilities subject to them, and a guide for determining sanctions for noncompliance.
- > At the 735/315/230-kV Lévis substation, the second synchronous condenser was recommissioned; the cost for refurbishing both condensers was \$35 million (Capitale-Nationale).

INVESTMENT IN THE TRANSMISSION SYSTEM (\$M)

	2009	2008	2007	2006	2005
System development	493	559	349	416	337
Reliability and long-term operability of assets	703	540	497	527	451
Total	1,196	1,099	846	943	788

At the administrative centre in Amos (Abitibi-Témiscamingue), power system electrician Alain Alarie and Mario Lachaine, Manager – Transmission Equipment Maintenance, discuss the refurbishment of Rapide-2 substation.

Refurbishment of Sorel substation (Montérégie). Michel Archambault, Chantal Findlay, Claude Turcotte, Martin Trottier, Yves Hardy, Christian Reid and Léodore Thibeault of Installations de transport – Richelieu.

- > Refurbishment and expansion of the 315/161/69-kV Hauterive substation continued and should be completed in 2012 at an estimated cost of \$79 million (Côte-Nord).
- > In the same region, we launched Project 3M, which consists in digitizing the 20 microwave links forming the telecommunication network between Manicouagan substation, Montagnais substation and the Manic-5 hydroelectric development. Completion is slated for 2013.
- > Progress continued on converting to a digital telecommunication network with the commissioning of new microwave links between Bergeronnes (Côte-Nord) and Lévis substations.
- > We upgraded the microwave links between Micoua (Côte-Nord) and Saguenay (Saguenay–Lac-Saint-Jean) substations, including the links from Bersimis-1 and Bersimis-2 substations (Côte-Nord).
- > As part of the modernization of the 735/315/120-kV Châteauguay substation (Montérégie), we replaced the control system of the back-to-back converters enabling interchanges with New York State (1,000 MW).
- > The project to refurbish the 230/120/25-kV Sorel substation continued and should end in 2010 (Montérégie).
- > An estimated \$42 million of work to refurbish the 120/25-kV Saint-Maxime substation and increase its transformation capacity will be completed in 2010 (Montérégie).
- > We completed reconstruction of the 120/25-kV Gatineau substation at a cost of \$19 million (Outaouais).
- > In Laval, we began building a new 120-kV substation on the site of Rivière-des-Prairies generating station and have nearly completed a 120-kV underground line that will replace the 69-kV overhead one. This project will be completed in 2010.
- > We began refurbishing the synchronous condensers at the 735/315/161/44-kV Abitibi substation, a \$71-million project set to end in 2011 (Abitibi-Témiscamingue).

It is because of technological innovation that Hydro-Québec TransÉnergie stays in the forefront of power transmission system design, operation and maintenance.

We increasingly rely on remote monitoring to track the status of equipment.

Accelerated deployment of digital technology is resulting in shorter equipment outages and lower repair costs.

At Des Hêtres substation in Shawinigan, technician Pierre Fafard inspects CapThor, a new capacitor bank protection.

Laboratory head technician Sylvie Mongrain checks the quality of insulating gloves to be worn by cable workers when performing live-line work.

The transformers at Langelier substation in Montréal are insulated with sulphur hexafluoride (SF₆). Support technician Luckner Verna, chief power system electrician Jean-Luc Gadoua, and electrical engineer Mathieu Lalonde monitor SF₆ quality using a sampling system and a hygrometer.

IMPROVING TRANSMISSION SERVICE THROUGH INNOVATION

In 2009, we invested \$16 million in developing technological innovations designed to improve the performance of the power system or to ensure its long-term operability. We carry out our innovation initiatives in collaboration with the Hydro-Québec research institute (IREQ), and with specialized research centres and firms.

- > We continued rolling out the IMAGINE project, designed to increase the efficiency of transmission system management through automated maintenance and enhanced processing of monitoring data. We can now better target maintenance work through such digital techniques as remote monitoring, telemetering, and remote uploading and diagnostics. In 2009, we connected 32 substations to a first remote maintenance centre and opened a second centre in the city of Québec. Most of our substations will ultimately be connected to a remote maintenance network.
- > We have developed the AE-150, a partial-discharge and hot-spot locator for latest-generation power transformers. This diagnostic tool, soon to be marketed, enables us to detect the ultrasonic waves emitted by partial discharges and hot spots, which provide information on the nature of power transformer problems and faults. The AE-150 is the result of a joint effort by IREQ and a Québec firm.

- > In collaboration with Hydro-Québec Équipement, we inaugurated a first modular protection, automation and control (MPAC) building at Joly substation (Laurentides) and a second at Grande-Vallée substation (Gaspésie). We are about to commission a third at Turcotte substation in Shawinigan. Unlike conventional control buildings, MPACs are standardized and factory-assembled in their entirety. With the experience from these projects, using MPACs will simplify engineering work and shorten lead times.
- > We have developed SMCT, a transformer switching control system that reduces the risk of saturation of a power transformer when it is energized. The goal is to avoid excessive inrush currents, system disturbances and premature deterioration of equipment. We installed two SMCTs in 2009, one each at Sainte-Marguerite-3 and Toulnostouc generating stations.

On January 16, 2009, a dense cloud of steam fog rose from the river in the Port of Montréal due to bitterly cold temperatures. At 8 a.m. that same day, Québec's demand for power reached a historic peak of 37,230 MW. The population responded to our public appeal to reduce consumption and the resulting savings of approximately 400 MW allowed us to handle the peak.

IN TOUCH WITH OUR CUSTOMERS

Our employees' commitment and expertise are key to our success.

André Boulanger
President, Hydro-Québec Distribution

In 2009, difficult economic conditions led to a marked decline in electricity sales to industrial customers, causing us to initiate or renew measures to suspend or defer a portion of our supply.

Nevertheless, we maintained our focus on continuous improvement and kept investing in the long-term operability and development of the distribution system.

We also launched two calls for tenders and a purchasing program for renewable energies, in accordance with the Québec Energy Strategy 2006–2015.

The economic downturn in the industrial sector slowed progress on the energy efficiency front, with new energy savings of 946 GWh in 2009. However, our target of 11 TWh in recurring energy savings by 2015 remains unchanged.

OUR MISSION

Hydro-Québec Distribution ensures a secure, reliable supply of electricity and delivers high-quality services to the Québec market.

OUR ACTIVITIES

To meet demand, Hydro-Québec Distribution relies primarily on the heritage pool of 165 TWh, which it purchases from Hydro-Québec Production. To meet demand beyond that volume, it purchases electricity under market conditions. The division ensures that the distribution system operates efficiently, reliably and safely at all times. It offers customers products and services tailored to their needs, as well as a wide range of energy efficiency programs.

OUR FACILITIES

The division operates 111,205 km of lines, a nine-location customer relations centre providing telephone and online services, and five distribution control centres, as well as one hydroelectric generating station and 23 thermal generating stations supplying customers on off-grid systems.

2009 IN FIGURES

Revenue	\$10.7 billion
Net income	\$365 million
Customers (% of revenue from electricity sales)	
Residential customers	54%
Commercial and business customers	19%
Large-power customers	27%
Property, plant and equipment as at December 31 (including work in progress)	\$8.7 billion
Investments	
Property, plant and equipment and intangible assets	\$709 million
Energy Efficiency Plan	\$257 million

CREDIT: JOAN SULLIVAN

The Saint-Ulric–Saint-Léandre wind farm, located in the Gaspésie region, was connected to Hydro-Québec's transmission system in 2009 and delivered its first kilowatthours in November.

The municipality of Sorel-Tracy, in the Montérégie region, purchased its first electric vehicle thanks to financial support from Hydro-Québec under the Go with the Flow campaign.

MANAGING SUPPLY RESOURCES

Hydro-Québec Distribution manages its supply resources to ensure reliable electrical service at the lowest possible cost. To do so, we rely on a flexible and diversified energy portfolio that enables us to deal with fluctuations in demand. The slowdown in the pulp and paper and smelting and refining sectors meant decreased sales to industrial customers. We therefore readjusted the measures we have implemented to balance supply and demand.

- > On October 30, a second progress report on the Electricity Supply Plan 2008–2017 was submitted to the Régie de l'énergie. This update integrates the most recent domestic demand forecasts and outlines the measures taken to suspend or defer contracted deliveries that exceed the requirements of the Québec market.
 - On September 29, the Régie de l'énergie approved a new agreement between Hydro-Québec and TransCanada Energy (TCE) for the temporary suspension of generation at the TCE facility in Bécancour. Renewal of a similar agreement allowed Hydro-Québec Distribution to suspend delivery of 4.3 TWh in 2009.
 - Under the agreements signed with Hydro-Québec Production for the deferral of a portion of baseload and cycling deliveries scheduled for 2008–2011, we deferred delivery of 4.2 TWh in 2009, for a cumulative total of 6.3 TWh since 2008.
 - On August 21, the Régie de l'énergie approved a new framework agreement with Hydro-Québec Production regarding very short-term supply. Effective from January 1, 2009, to December 31, 2013, this agreement is a last-resort tool enabling us to cover unforeseen needs on the domestic market in real time, once all other means at our disposal have been applied.
- > In 2009, Hydro-Québec Distribution launched two calls for tenders and a purchase program for renewable energies, in accordance with Québec government orders-in-council.
 - On April 14, Hydro-Québec Distribution issued a call for 125 MW of power generated in Québec by new cogeneration plants with biomass accounting for at least 75% of the fuel used to generate power. We accepted eight bids from seven proponents for a total of 60.7 MW. Deliveries are scheduled to begin December 1, 2012. With terms ranging from 15 to 25 years, the contracts will be submitted to the Régie de l'énergie for approval in the spring of 2010.

We ensure optimum management of our supply resources.

Energy efficiency is one of Hydro-Québec's three avenues of development.

We remain attentive to customer needs so as to maintain quality service.

2009 ENERGY STAR Award for Sustained Excellence. Marie-Claude Pomerleau, Hydro-Québec, and Carol Buckley from Natural Resources Canada's Office of Energy Efficiency.

Les Brasseurs du Nord was the grand prize winner of the 2009 ENERGY WISE Competition of Excellence. The microbrewery was recognized for having integrated various energy efficiency measures when it expanded its facilities in Blainville, in the Laurentides region.

Line worker Benoit Ouellette prepares to install a capacitor bank in Granby (Montérégie) as part of the Addition 1,000 Mvar project, which is being implemented to ensure transmission system reliability during periods of exceptional peak demand.

- On April 30, Hydro-Québec Distribution issued a call for two 250-MW blocks of Québec-generated wind power, one reserved for Aboriginal projects and one for other community projects. Bids must be submitted by May 19, 2010. Deliveries should begin between December 1, 2012, and December 1, 2014, under 20-year contracts.
- On July 15, Hydro-Québec Distribution launched a power purchase program targeting small hydro projects (50 MW or less), for a total capacity of 150 MW. This program is intended for Aboriginal, local and regional communities. Bids must be submitted by March 16, 2010. The facilities should be commissioned between 2011 and 2015, under 20-year contracts.
- >The wind power projects resulting from the 2,000-MW call issued in 2005 are moving at a good pace. The proponents are continuing with the consultation process and impact assessments. The first deliveries are scheduled to come on stream between 2012 and 2015.
- >The Saint-Ulric–Saint-Léandre wind farm began delivering power on November 20. This is the fourth wind farm to be commissioned in the Gaspésie region in response to the 2003 call for wind power, for a total cumulative capacity of 447 MW to date.

ONGOING EFFORTS IN ENERGY EFFICIENCY

In 2009, Hydro-Québec Distribution readjusted its energy efficiency efforts in light of the difficult economy. Nevertheless, our programs generated new savings of 946 GWh, for a total of 4.3 TWh in annual savings achieved to date. We are maintaining our goal of 11 TWh by 2015, including 2 TWh from the distribution system's enhanced energy efficiency performance.

- >The RECYC-FRIGO Environnement™ program has met with great success since it was launched in March 2008. As at December 31, 2009, 186,162 energy-guzzling refrigerators and freezers had been collected throughout Québec for savings of 147 GWh, equivalent to 71% of the upwardly revised target set for the end of 2010.
- >In April 2009, the ENERGY WISE Home Diagnostic program, launched in 2004, reached the one-million mark for reports sent out.
- >In 2009, the Go with the Flow campaign received the STRAT Audacity Prize from the Association des professionnels de la communication et du marketing (APCM) and was also named Campaign of the Year at the 2009 gala of the Relationship Marketing Association.
- >In May 2009, we received the government of Canada's ENERGY STAR Award for Sustained Excellence in recognition of our ongoing efforts to promote ENERGY STAR® qualification under our ENERGY WISE programs. This was Hydro-Québec's sixth ENERGY STAR Award in five years.

Line worker Simon Robichaud connects a new customer to the power grid. In 2009, nearly 53,000 hookup requests were fulfilled on schedule.

Operator Sylvain Sincerny at the distribution control centre in Saint-Jérôme.

TAILORING OUR SERVICES TO MEET CUSTOMERS' NEEDS

Hydro-Québec Distribution implemented various support measures to minimize the impact of the recession on its customers.

RESIDENTIAL, COMMERCIAL AND BUSINESS CUSTOMERS

- > Hydro-Québec offers special payment arrangements to low-income customers who are having trouble paying their electricity bills. In 2009, we entered into 32,107 such arrangements, for arrears of \$189 million.
- > We continued to improve access to our services in 2009. Average telephone response time was brought down to 190 seconds, from 379 seconds in 2008.
- > In order to enhance our services to business customers, we developed a personalized customer relations approach adapted to their consumption profile.
- > In March 2009, the Régie approved an across-the-board rate increase of 1.22%, effective April 1, 2009. In March 2010, further to an application filed in July 2009, it approved a 0.4% across-the-board increase, effective April 1, 2010.

RESIDENTIAL, COMMERCIAL AND BUSINESS CUSTOMER SATISFACTION

LARGE-POWER CUSTOMERS

Industrial, commercial and institutional customers with a power demand of 5 MW or more consume 38% of the electricity distributed in Québec.

- > On July 8, 2009, the Québec government authorized Hydro-Québec Distribution to enter into special rate agreements with industrial customers (power consumption greater than 50 MW) affected by the recession. This measure resulted in savings of \$21 million for these customers for the fiscal year.
- > In 2009, we asked for the Régie's authorization to create an account for deferred expenses to facilitate the application of the Load Retention Rate, designed for companies experiencing financial difficulties. This rate applies to Rate L customers only. To be eligible, customers must demonstrate, among other things, that they obtained non-refundable deductions from their other suppliers or partners and that steps will be taken to improve their profitability.

SUSTAINED INVESTMENT IN THE DISTRIBUTION SYSTEM

Hydro-Québec Distribution continues to invest in its system. The division's efforts are focused on the long-term operability and performance of its facilities and the effective management of an increasing demand for hookups. Hydro-Québec Distribution is also pursuing its efforts to reduce the duration and scope of service interruptions.

HYDRO-QUÉBEC DISTRIBUTION INVESTMENTS (NON-EEP^a) (\$M)

	2009	2008	2007	2006	2005
Development	325	308	267	283	263
Reliability and long-term operability of assets	384	356	457	409	383
Total	709	664	724	692	646

a) EEP: Energy Efficiency Plan

Refurbishment of the underground distribution grid in Lorraine, in the Laurentides region. Frederic Vincent, cable worker, and Richard L. Robert, cable crew chief.

Roger Perron of Hydro-Québec (right) presents the Business of the Year Award to Yannick Laroche of Marmen Énergie at the Wind Energy Industry Conference hosted by TechnoCentre éolien in the Gaspésie region.

In 2009, Hydro-Québec Distribution adopted a system evolution plan, which provides an overall view of the distribution system's development requirements over a 15-year period. This plan targets the twofold objective of improving service quality and reliability and optimizing operating efficiency.

- > We pursued the system automation program aimed at reducing outage durations. As at December 31, 2009, the division had deployed 48% of the 3,752 units of remote-controlled equipment scheduled for installation throughout Québec.
- > We are presently conducting a pilot project on Montréal's south shore to test CATVAR, a voltage regulation and reactive power control system designed to reduce consumption and energy losses on the distribution system. Deployment of CATVAR is planned to start in 2010, subject to approval by the Régie de l'énergie.
- > In response to a request by Hydro-Québec TransÉnergie aimed at ensuring transmission system reliability under exceptional peak demand, we accelerated the installation of a portion of the capacitor banks scheduled for deployment starting in 2010 under the CATVAR project. Under the Addition 1,000 Mvar project, roughly 800 capacitor banks with manual control boxes will be installed, primarily in the Montréal, Richelieu and Laurentides regions.
- > In 2009, we fulfilled almost 53,000 hookup requests on schedule for a total investment of \$203 million.
- > On June 26, the Régie approved a project to connect the village of La Romaine, in the Basse-Côte-Nord region, to the Hydro-Québec Distribution grid. Since 1972, this village has been powered by a diesel generating station consuming 3.5 million litres of fossil fuel per year. Connecting it to the grid will enable Hydro-Québec to start supplying it with renewable energy as of fall 2012 at the latest.
- > Hydro-Québec Distribution's program to prevent work-related accidents yielded good results in 2009, with an accident frequency rate of 3.56 for 200,000 hours worked. The division is well on its way to reaching its target of 3.5 by 2011.

INNOVATING TO IMPROVE DISTRIBUTION SERVICE AND ENERGY EFFICIENCY

Hydro-Québec's innovation efforts focus on two main thrusts: improving system performance and efficiency, and helping customers achieve energy savings under the Energy Efficiency Plan. In 2009, the division invested some \$20 million in developing cutting-edge technological solutions in collaboration with Hydro-Québec's research institute, IREQ.

- > We developed SimLoc, a highly effective tool for locating faults on underground lines. Deployment of the SimLoc system began in 2009 and will continue until the summer of 2010.
- > We developed a remote manipulator to lift live conductors during certain types of operations, such as pole replacement.
- > IREQ's energy technologies laboratory developed a diagnostic tool to help small to medium-sized industrial customers adopt energy-efficient measures. Based on a questionnaire filled out by the customer, this user-friendly tool automatically generates a consumption profile featuring tailored recommendations linked to Hydro-Québec's energy efficiency programs.
- > In 2009, a new version of the software designed to simulate and predict building power and energy requirements was field-tested. It models the energy consumption of buildings in the industrial and commercial sectors, which amounts to 36 TWh a year in Québec.

Drilling for concrete pouring inside one of the three penstocks of Eastmain-1-A powerhouse (Baie-James).

STRIVING TO BUILD EXCELLENCE

With their drive to succeed, our teams guarantee the success of our projects.

Réal Laporte

President, Hydro-Québec Équipement
President and Chief Executive Officer,
Société d'énergie de la Baie James

Hydro-Québec Équipement and Société d'énergie de la Baie James (SEBJ) had a record volume of activity in 2009. While handling this exceptional workload, our teams managed to meet and occasionally get ahead of deadlines, resulting in considerable savings. This achievement was no small feat given that 2009 was a very busy year for the civil engineering sector.

Regarding generating assets, a number of our projects passed major milestones. The Rupert diversion (Baie-James) became operational, increasing the output of the La Grande complex. Construction of Eastmain-1-A and Sarcelle powerhouses also progressed steadily. Chute-Allard and Rapides-des-Cœurs generating stations (Mauricie) are now operating at full capacity. In Minganie (Côte-Nord), we began construction of the Romaine complex, a project that will extend until 2020.

As for transmission facilities, we continued activities to extend and strengthen the system, while initiating the study of many new line and substation projects. Several projects also came to a close in 2009, notably construction of Outaouais substation and work needed to increase transmission capacity and integrate new wind farms in Gaspésie. We also refurbished a number of substations and lines to achieve reliability and long-term operability targets.

OUR MISSION

Hydro-Québec Équipement and Société d'énergie de la Baie James design, engineer and carry out projects for the construction and refurbishment of generating and transmission facilities that meet the needs of their customers, Hydro-Québec Production and Hydro-Québec TransÉnergie, and that are of greatest benefit to the company. They offer high-quality, cost-effective solutions that apply best practices in social and environmental acceptability, and that involve the participation of communities and industry.

OUR ACTIVITIES

Our services cover all project stages and aspects: project management, communications with communities concerned, government permitting, geospatial data and mapping, field surveys, biophysical and human environment studies, engineering, procurement, construction, manufacturing quality assurance, and managing work up to handoff to the operator. We are constantly seeking new ways to maximize facility performance while reducing costs and lead times.

2009 IN FIGURES

Volume of activity	\$2.7 billion
Main customers (% of volume)	
Hydro-Québec Production	65%
Hydro-Québec TransÉnergie	33%
Other	2%

May 2009 groundbreaking for the Romaine project in the presence of Québec Premier Jean Charest, ministers Claude Béchar and Pierre Corbeil, representatives of Innu and other communities in the region, and Hydro-Québec President and CEO Thierry Vandal.

The transfer tunnel before the impoundment of Rupert forebay and tailbay, which the tunnel connects.

MEETING EVERY CHALLENGE

Scattered across Québec, our projects present considerable technical, material, social and environmental challenges. We owe our success to the quality of our teams and those of our partners, who combine willing cooperation with prompt performance. In 2009, our volume of activity grew to \$2.7 billion, up 11% over 2008.

TOTAL VOLUME OF HYDRO-QUÉBEC ÉQUIPEMENT AND SEBJ ACTIVITY (\$B, FINANCING EXCLUDED)

2009	2008	2007	2006	2005
2.7	2.4	2.2	2.0	2.1

KEY ACHIEVEMENTS IN 2009 GENERATION PROJECTS

- >As part of the Eastmain-1-A/Sarcelle/Rupert project (Baie-James), we completed the last Rupert diversion structures (Nemiscau-2 dam, all dikes, the canals and the instream flow release structures) two months ahead of schedule and under budget, and proceeded with impoundment of the Rupert diversion bays. Diverting part of the Rupert's flow to the Grande Rivière will increase by 5.3 TWh the generating capability of the La Grande complex, more specifically that of Robert-Bourassa, La Grande-2-A and La Grande-1 generating stations. At the same time, Eastmain-1-A and Sarcelle powerhouses will generate 3.4 TWh by 2012. Hydro-Québec will thus increase its annual output by 8.7 TWh thanks to this project.
- >As part of the same project, we finished building the new Waskaganish drinking water plant, designed to meet that community's existing and future needs.
- >We commissioned the last units at Chute-Allard and Rapides-des-Cœurs generating stations, which now have a total installed capacity of 138 MW (Mauricie).
- >We completed the rehabilitation and refitting of La Tuque generating station, increasing its peak capacity by 60 MW, for total regional spinoffs of \$41 million (Mauricie).
- >We also finished refurbishment work at Chute-Hemmings generating station (Centre-du-Québec) and Bryson generating station (Outaouais).
- >The Barrière dam (Abitibi-Témiscamingue) and Mercier dam (Outaouais) refurbishment projects were successfully completed.

In 2009, prevention programs and safety rules were applied very strictly on our jobsites, allowing us to maintain a record-low rate of work-related accidents.

The Romaine complex will be the largest construction project in Canada for the next several years.

In 2009, we worked on more than 1,000 projects, including over 800 in the area of transmission.

We rely on innovation to minimize project costs and lead times.

The Prix Léonard, Energy category, from the Association of Consulting Engineers of Québec, presented by Louis-Régis Tremblay, Alcoa Canada, to Gaëtan Thibault of AECOM Tecsumt and Pierre Geoffrion of Hydro-Québec for the Péribonka hydropower project.

Expansion of Saraguay substation in Montréal was completed in 2009.

- > In Montérégie, work is proceeding on schedule to refurbish the 120/25-kV Saint-Maxime substation, increase its transformation capacity and refurbish the 230/120/25-kV Sorel substation. Both projects are slated to end in 2010.
- > We began building the last component of the new Ontario inter-connection, the 315-kV Chénier–Outaouais line, to be completed in 2010.
- > Work continued to refurbish and expand the 315/161/69-kV Hauterive substation and is scheduled to end in 2012 (Côte-Nord).
- > Near the city of Québec, we began the 315/25-kV Anne-Hébert substation and a 315-kV line, both to be completed in 2010 (Capitale-Nationale).
- > We began clearing the right-of-way for the 315-kV line 102 km long that will link Sarcelle and Eastmain-1 powerhouses to the grid in 2011 (Baie-James).
- > We started construction of the 161/25-kV Waconichi substation and of a 161-kV line to meet the growing needs of Mistissini under a project to end in 2011 (Baie-James).
- > At the 735/315/161/44-kV Abitibi substation, we initiated the overhaul and upgrading of two synchronous condensers to be recommissioned in 2011.
- > In the Gaspésie and Bas-Saint-Laurent regions, we began building the 230-kV Goémon–Mont-Louis–Gros-Morne line in order to integrate wind farm generation. The line will be completed in 2011.
- > The environmental assessment on extending the transmission system in Minganie, and more specifically connecting the Romaine complex, was filed with the competent authorities in August 2009. The project involves building four substations and about 500 km of transmission lines. Work should begin in the second quarter of 2011, subject to the necessary approvals.

INNOVATION: THE KEY TO SUCCESSFUL CONSTRUCTION PROJECTS

To successfully carry out projects that are often highly technical and logistically complex, our teams combine the use of state-of-the-art methods and technologies with an exceptional ability to innovate. They constantly pursue the same goal: meet the needs of Hydro-Québec Production and Hydro-Québec TransÉnergie while minimizing project costs and lead times.

- > In 2009, we used CATIA® V5, an interactive 3D computer-aided design platform, to model reinforcing steel for powerhouse concrete, a world first. We developed a module for inserting and adjusting all types of steel rebars in structural elements such as floors, columns, straight walls, curved walls and arches. The module includes full information on rebar placement and produces conventional 2D placement drawings.
- > At Eastmain-1-A, we used prefabricated elements extensively in building the downstream wall, generator floor and transformer platform of the powerhouse. Thanks to this quick, efficient process, we were able to finish construction of the building envelope before winter, enabling us to continue work sheltered from the elements. As a result, no temporary facilities had to be built, shaving several months off our initial schedule.

Researcher Alessandra Maria Serventi gets ready to insert a specimen prepared with a focused ion beam (FIB) system into the column of a scanning transmission electron microscope (STEM), both acquisitions of the Hydro-Québec research institute (IREQ). These devices are pushing back the frontiers of materials science.

BREAKDOWN OF INNOVATION EFFORTS BY HYDRO-QUÉBEC'S RESEARCH INSTITUTE IN 2009 (BY AMOUNT INVESTED)

LEVERAGING INNOVATION FOR GROWTH

Hydro-Québec relies on innovation and new technologies to improve performance in its operations, to develop areas of growth and to better serve its customers. Thanks to its exceptionally skilled teams of computer and communications experts and researchers, the company succeeds in meeting the many highly technical challenges that it faces not only in the area of electricity, but also in the indissociable field of information and communication technology. We invest some \$100 million annually in our research institute, IREQ. In 2009, researcher efforts focused on power system performance, reliability and long-term operability. They were also directed toward the integration of wind power into the grid, emerging renewables (e.g., hydrokinetic and salinity-gradient energy), geothermal energy and ground transportation electrification.

At the same time, we continued converting to a digital communication network and integrating the information and communication systems that support both power system functions and company office applications. Extensive work has also been done on computer security, and specifically cyber security.

In the Îles de la Madeleine (Île du Havre Aubert), financial support from the Fondation Hydro-Québec pour l'environnement will allow recreational activities to coexist with environmental protection.

A RESPONSIBLE APPROACH

Over the years, Hydro-Québec has laid the foundations of a sustainability culture that now encompasses all aspects of the company's activities, from its overall business objectives to operations in the field, including the day-to-day work of its employees, all of whom are committed to a responsible approach. To meet the needs of the present while preserving the natural heritage and energy future of generations to come, Hydro-Québec relies mainly on renewable energies, energy efficiency and technological innovation. We systematically incorporate economic growth into our infrastructure projects, without ever losing sight of environmental imperatives.

Hydro-Québec's *Sustainable Development Action Plan 2009–2013*, published in March 2009, outlines the company's contribution to Québec's *Government Sustainable Development Strategy 2008–2013*. It lays out 10 actions consistent with Hydro-Québec's main business objectives and accompanied by indicators and improvement targets. The results from the Plan's first year of implementation are presented on page 39 of this Annual Report.

Planting jack pines to speed up the re-vegetation process on the Rupert diversion jobsite (Baie-James).

Hydro-Québec was awarded first prize in the 2009 *Leaders in Sustainable Transportation* contest. From left to right: Joël Gauthier, Agence métropolitaine de transport, Maryse Lambert and Maria Vaccaro, Hydro-Québec, and Bernadette Brun, Voyagez futé.

Charles Sarthou, forest engineer, rides his bicycle to work.

THE ENVIRONMENT: AN IMPORTANT ASPECT OF OUR ACTIVITIES

When it comes to preserving the environment, Hydro-Québec is active on many fronts—in the field and in day-to-day operations—because we know that every action counts. From construction sites to administrative buildings, our activities are governed by a desire for sustainable development that is demonstrated in our increasing efforts in every sphere: environmental impact assessments, environmental compliance monitoring at jobsites, archaeological digs, site rehabilitation, management of the vehicle fleet and employee travel, recycling and sustainable procurement, employee and public education about energy efficiency and environmental issues, etc.

- > We continued the ambitious archaeological inventory program undertaken in 2002 as part of the Eastmain-1-A/Sarcelle/Rupert project. Digs were conducted at 29 sites, one of which contains 20 areas of human occupation spanning more than four millennia. Another remarkable site contains a collection of artifacts related to the fur trade and vestiges of longhouses whose shape is reminiscent of a *shaputuan*. Workers at the Rupert workcamp were invited to an open house where experts explained various aspects of field archaeology, talked about First Nations culture and history, and presented the results of the latest excavations.
- > Under the multipartner program for undergrounding of cabled systems on cultural and heritage sites, a joint initiative with telecommunications companies and the Association des Compagnies de Téléphone du Québec, we undergrounded the distribution system along Rue Principale in the Aylmer sector of the city of Gatineau. Because a prior study had shown high archaeological potential in this area, the excavation was overseen by archaeologists. They discovered an Aboriginal firepit dating from the mid-19th century, confirming that Aboriginal people were still spending time on their former lands despite the growing Euro-Canadian presence.

- > Hydro-Québec is aware of the impact of employee travel on greenhouse gas emissions in Québec. That is why in 2009 the company replaced 200 of its light-duty vehicles (44% of those replaced during the year) with more energy-efficient models. The result is a 139,888-litre reduction in annual fuel consumption and a 342-tonne reduction in CO₂ emissions from these vehicles. In total, CO₂ emissions from the company's vehicle fleet have decreased by 1,833 tonnes since 2005, despite the increase in the number of vehicles.
- > Hydro-Québec has been involved in the *allégo* program since 2006. The goal of this initiative by the Agence métropolitaine de transport is to reduce emissions of CO₂ and other atmospheric pollutants by encouraging the use of means of transportation other than single-occupant vehicles for travel between home and work. Under the *allégo* program, we provide bicycles for our employees' use and offer various incentives to promote public transit, carpooling and active modes of transport, such as walking and cycling. In 2009, Hydro-Québec joined The Carpooling Network, an organization that works as a facilitator for people interested in carpooling for the commute to work and business-related travel.
- > We recover insulating oil from our facilities. In 2009, we decontaminated 88% of our recovered oil for reuse, mainly in our transformers, reactors and circuit breakers. The remainder was reclaimed for other purposes.
- > The Fédération Québécoise des Municipalités and the company Peintures récupérées du Québec received a \$100,000 grant from Hydro-Québec to establish the Fonds RecycFluo. The goal of this initiative—the first of its kind in Canada—is to help municipalities that want to enable consumers to recycle compact fluorescent lightbulbs. As at December 31, 2009, 159 municipal organizations representing 389 municipalities had taken advantage of the service and 15,722 compact fluorescents had been recovered, diverting 47,166 mg of mercury from landfill sites.

The Rallye Énergie Alternative hits the road in Gatineau. The goal of this annual event is to increase public awareness of the high performance of the latest propulsion technologies and alternative fuels. The Ford Escape Plug-In Hybrid currently being tested at Hydro-Québec came in second.

Lookout built by the RCM of Argenteuil on the site of Carillon generating station, in the Outaouais region, with financial support from Hydro-Québec.

- > We introduced the *Mérite de l'environnement et du développement durable* contest in 2003 to recognize employees for their outstanding actions or praiseworthy accomplishments in the area of environment and sustainability, whether on the job or in the community. In 2009, Raynald Charest won the environmental initiative award for applying sustainable methods in re-roofing the Victoriaville administrative centre. His innovative, targeted approach led to an 86% reduction at source of residual materials, and savings of \$752,500.
- > The 22nd edition of Environment Month, held in May, revolved around the theme *L'environnement: l'énergie d'une passion!* Hydro-Québec organized various activities and talks to publicize its achievements and increase employees' awareness of the importance of every action they take to protect the environment.
- > Finally, *Corporate Knights* magazine ranked Hydro-Québec as the fifth-best corporate citizen in all of Canada in 2009, based on environmental, social and governance indicators.

A PARTNERING APPROACH

Prompted by a strong sense of social responsibility, we actively support community initiatives to improve people's quality of life, preserve the natural heritage and develop a culture of sustainability. Through our major infrastructure projects, we also play a decisive role in regional land use, following an approach of partnering with the communities concerned.

- > In 2009, the Fondation Hydro-Québec pour l'environnement allocated \$1.0 million to 19 projects in 11 of the province's administrative regions. For example, we supported a project by the Îles-de-la-Madeleine ZIP Committee to protect the archipelago's inland water bodies without interfering with recreational activities. Among other initiatives, this organization plans to develop an access road, a parking lot, a dock and a boat launch at Pointe-des-Canots on Île du Havre Aubert to channel the movements of hunters and anglers using the Baie du Havre aux Basques.

- > Hydro-Québec fully subscribes to the principle of corporate responsibility, and considers it a duty to help improve the well-being of Québec society in many ways. In 2009, it provided \$22.5 million in donations and sponsorships to support organizations and projects throughout the province. For more information, see our Web site at www.hydroquebec.com/donations-sponsorships.
- > In September, Hydro-Québec and the municipality of Saint-Octave-de-Métis, in the Bas-Saint-Laurent region, marked the completion of community projects made possible by the company's Integrated Enhancement Program (IEP). After the Rimouski-Les Boules line was built, the town received \$135,364 from Hydro-Québec—equal to 1% of the capitalized cost of the line project—to renovate community, sports and recreation facilities. Altogether, the company paid \$697,900 to eight towns in the regional county municipalities (RCMs) of La Mitis, Rimouski-Neigette and Matane in connection with this project.
- > In October, the municipality of Canton de Roxton (Montérégie) celebrated the conclusion of several projects accomplished thanks to the IEP: improvements to the community hall, restoration of the banks of the Rivière Noire, upgrade of the Oxy-bulle youth centre, construction of a soccer field, and more. Under the IEP, Hydro-Québec allocated \$2,558,500 to municipalities and RCMs affected by the construction of the Des Cantons-Hertel and Montérégie-Acton lines, including \$253,420 to the municipality of Canton de Roxton.
- > With financial support from Hydro-Québec, the RCM of Argenteuil built a lookout on the site of Carillon generating station, near the Brownsburg-Chatham municipal campground. This rest stop just next to the Route verte offers a panoramic view of the generating station and the Rivière des Outaouais (Ottawa River).

Jean-Pierre Grenier, chief powerhouse mechanic at the mechanical workshop in Shawinigan (Mauricie), uses a horizontal lathe to machine the shaft of one of the turbines at Beauharnois generating station. The steel chips and scraps of aluminum and bronze from the shop are recycled rather than sent to landfill.

Work to characterize Romaine spawning grounds in order to develop mitigation measures.

HYDRO-QUÉBEC'S SUSTAINABLE DEVELOPMENT ACTION PLAN 2009–2013

The *Sustainable Development Action Plan 2009–2013* consists of a series of actions to preserve the environment and promote collective well-being and economic development. They are aligned with the company's business objectives, which focus on energy efficiency, renewable energies and technological innovation. Hydro-Québec reports formally on these initiatives in its *Sustainability Report 2009*.

	Action	Indicator	2009 results
1	Build hydropower projects and contribute to the development of wind power.	Capacity and energy available (MW and GWh)	138 MW
2	Increase the capacity of existing hydroelectric generating stations.	Gains in peak capacity (MW)	52 MW
3	Step up energy efficiency initiatives.	Annual energy savings achieved (TWh)	4.3 TWh
4	Continue to help low-income customers.	Number of arrangements with low-income customers ^a	32,107
5	Reduce transport-related GHG emissions.	Atmospheric emissions from the vehicle fleet (tonnes)	55,016 t
6	Promote reduction at source, reuse and recycling.	Number of at-source reduction or reclamation programs introduced or optimized	4
7	Establish specifications for sustainable procurement.	Number of product purchasing guides that include sustainable specifications	2
8	Inform and educate employees regarding sustainability and the company's approach. Help employees learn to apply sustainability principles to their daily activities.	Percentage of employees educated	72%
		Percentage of employees having sufficient knowledge about sustainability	10.5%
9	Improve vegetation control methods on the distribution system to better protect biodiversity.	Percentage of vegetation control operations per year with integrated measures for promoting biodiversity	89%
10	Organize sustainable events and promote responsible management of events sponsored by Hydro-Québec.	Average number of contributing measures implemented among the 25 measures selected for the sustainable management of events	10.7/25

a) Including long-term arrangements.

With baby boomers retiring at a growing rate, Hydro-Québec has set up an interactive recruitment system and targeted training programs to renew its knowledge capital. Maxime Thibodeau, Gabriel Trudeau and Ahen Bui are part of the next generation.

A MAINSPRING OF THE QUÉBEC ECONOMY

Hydro-Québec plays a leading role in the Québec economy: as an employer, with about 23,000 employees and 150 places of business located all over the province, as well as through its construction projects and its work to refurbish or upgrade the power system. In 2009 alone, the company managed over 1,000 jobsites, large and small, some with budgets of hundreds of millions of dollars.

In addition, we are actively involved in research and other initiatives carried out by national and international organizations working in the field of electricity. Under various cooperation projects, we also share our know-how with developing countries.

At the beginning of 2009, Gabriel Bournival, Manager – Real Estate Management, took part in the rollout of the emergency biohazard response plan instituted by Hydro-Québec to ensure service continuity in the event of an influenza A (H1N1) pandemic.

Joël Lessard, Jean-Philippe Miron and Frédéric Blais interned at our research institute as part of their university studies.

Arthur Lamoureux (right) retired at the age of 82, after setting a record for longevity with 67 years of faithful service in system control. Standing next to him is Michel Martinez, Vice President – Human Resources.

THE PEOPLE WHO ARE BUILDING OUR FUTURE

Our employees' knowledge and commitment are an essential ingredient in the company's success. For this reason, we take particular care in welcoming and supervising new employees and measuring their job satisfaction so that we can improve our integration efforts. Our top priorities are to ensure the replacement of our management personnel and maintain critical know-how, especially if it is rare or unique. Furthermore, we are working to renew our knowledge capital through an interactive recruitment system and targeted training programs.

We are also putting substantial efforts into workplace health and safety, an issue that is of central importance to us. Elimination of hazards at source, risk reduction and control, and employee information and training are among our main areas of focus.

- > Maintaining a harmonious working atmosphere is crucial to our success. We therefore renewed our collective agreements with seven of our eight unions, or 91% of our unionized employees, before the expiry dates. These agreements, which will run for five years, will be in effect until December 2013 or 2014, as the case may be.
- > According to our projections, as much as 20% of our workforce could retire between now and 2013. In anticipation of this change, we are making efforts to safeguard and renew the knowledge base associated with management positions and the trades most at risk. We have consequently established plans targeting specialized skill sets deemed vulnerable by the divisions and corporate units.
- > To provide a succession at different levels of management, we have taken a number of steps including various programs that will be rolled out in 2010. As well, managers' expertise profiles have been updated on the basis of the company's business objectives.
- > Of the 3,036 permanent employees eligible for retirement in 2009, 1,072 left the company, compared with 896 out of 2,835 in 2008.

- > According to our annual survey, new hires rated their satisfaction with employee induction and integration procedures at 8.4 out of 10, the same result as in 2008. Of the 1,844 new hires in 2009, 70% were under 35 years of age.
- > Hydro-Québec is a founding partner of the Institute of Electrical Power Engineering (IEPE). In 2009, we awarded 15 general scholarships and 42 traveling scholarships to 52 IEPE students, for a total contribution of \$102,838. Altogether, 125 IEPE graduates—including 18 in 2009—have joined the company's ranks since the Institute was established in 2001.
- > We offered internships to 241 university students in graduate and undergraduate programs. We also received 51 college-level trainees, most of them enrolled in industrial electronics. In order to welcome more students in the coming years, we have introduced annual targets for the number of internships.
- > In 2009, we devoted 3.9% of the total payroll to training programs, and 16,326 employees took part in at least one training activity. In preparation for the number of retirements anticipated, we centralized our training and skill development activities to better suit the needs, optimize our efforts and hold down rising costs.
- > As regards diversity, we submitted our equal access to employment program to the Commission des droits de la personne et des droits de la jeunesse. The goal of the program is to bring the profile of our workforce into line with the market reality, based on the rates of availability established for the five groups targeted by the *Act respecting equal access to employment in public bodies*, namely women, Aboriginal people, ethnic minorities, visible minorities and people with disabilities.
- > The frequency of work-related accidents was down 14% relative to 2008, at 2.83 per 200,000 hours worked.

IREQ researcher Paul Labbé with his dog Pruneau.

Sri Shan, of the recruitment centre in Montréal, in discussion with Anne-Marie Otis of the Internet team. Hydro-Québec's workforce will become more diversified as a result of the equal access to employment program, which targets women, Aboriginal people, ethnic and visible minorities, and people with disabilities.

>Senior Management strengthened management standards and reaffirmed its commitment to workplace health and safety. In late 2009, a campaign was launched in cooperation with the unions to educate employees about the fact that prevention is a shared responsibility and to emphasize the importance of making adherence to safety and security rules standard behavior.

A MAJOR PLAYER IN REGIONAL DEVELOPMENT

Hydro-Québec works to ensure that all of the province's regions reap the benefits of its development projects and day-to-day operations. Every year, its expenditures and investments generate billions of dollars in spinoffs and support thousands of jobs. The current construction projects alone are sizable factors in the vitality of a number of regional economies.

- >The Eastmain-1-A/Sarcelle/Rupert project employed 3,700 people at the peak of construction, in 2009. This past year, contracts and expenditures associated with the project amounted to \$40 million for the Nord-du-Québec region, \$75 million for Abitibi-Témiscamingue and \$125 million for Saguenay-Lac-Saint-Jean.
- >The Romaine project will generate spinoffs of \$3.5 billion in Québec, including \$1.3 billion for the Côte-Nord. Between 2012 and 2016, the peak labor force will be in excess of 2,000 workers, most of whom will come from the region.

Hydro-Québec endeavors to spread its purchasing throughout the province, always at the best possible cost and according to strict procurement criteria. We also try to buy sustainable products such as recycled ink cartridges and paper.

PROCUREMENT OF GOODS AND SERVICES (\$B)^a

2009	2008	2007	2006	2005
2.9	2.7	2.6	2.7	2.4

- >Procurement of goods and services inside and outside Québec totaled \$2,925 million in 2009, compared with \$2,660 million in 2008:
 - \$1,431 million for the purchase of goods
 - \$27 million for rentals
 - \$1,036 million for specialized services and other work
 - \$431 million for professional services
- >Goods and services procured from companies in Québec totaled \$2,557 million, or 87% of all procurement.
- >The number of jobs in Québec supported by our overall procurement of goods and services is estimated at 18,291, including 12,333 direct jobs.
- >Given the substantial increase in our investments in the power system, we have made efforts to ensure the security of our procurement of goods and services for the coming years. For example, we have lengthened the planning cycle for long-term needs and standardized many commonly used products and pieces of equipment. We have also diversified our sources of supply and increased the number of firm orders. Taken together, these measures enabled us to cut overall procurement costs.
- >In 2009, our capital spending on various hydroelectric projects generated 3,992 on-site jobs for contractors.^b

a) Excluding procurement by Société d'énergie de la Baie James.
 b) Including projects carried out by Société d'énergie de la Baie James.

Michel Dufour, mechanical technician, and Gervais Bellavance, chief powerhouse mechanic, worked together during the refitting of Outardes-4 generating station to ensure transfer of know-how.

Cable workers Mélissa Chaperon and Nicolas Dancause prepare a cable to be laid in the conduits of the underground system.

REGIONAL SPINOFFS FROM HYDRO-QUÉBEC PROCUREMENT (\$'000)^a

Administrative region	Procurement of services ^b	Procurement of goods ^c	Total
Abitibi-Témiscamingue (08)	22,376	12,040	34,416
Bas-Saint-Laurent (01)	13,330	4,036	17,366
Capitale-Nationale (03)	149,035	43,092	192,127
Centre-du-Québec (17)	92,254	39,881	132,135
Chaudière-Appalaches (12)	40,165	38,298	78,463
Côte-Nord (09)	61,524	10,657	72,181
Estrie (05)	11,790	19,788	31,578
Gaspésie-Îles-de-la-Madeleine (11) ^d	15,277	768	16,045

Montréal (06)	407,265	473,265	880,530
Nord-du-Québec (10)	17,778	2,445	20,223
Outaouais (07)	10,162	20,993	31,155
Saguenay-Lac-Saint-Jean (02)	133,060	28,719	161,779
Total	1,435,287	1,122,125	2,557,412

a) Amounts billed by suppliers located in the region, excluding procurement by Société d'énergie de la Baie James.

b) Specialized services, professional services and other work.

c) Purchases and rentals.

d) In the regional county municipality of Matane and the Gaspésie-Îles-de-la-Madeleine region, contracts awarded under the first Hydro-Québec Distribution call for wind power resulted in spinoffs estimated at \$94 million in 2009.

To form an idea of the job opportunities created by the Romaine project in the Côte-Nord region, an Innu delegation visited an Eastmain-1-A/Sarcelle/Rupert jobsite (Baie-James).

Agrologist Louis Lesage (right), of Acquisitions et projets immobiliers, received the Mérite award from the Québec Interprofessional Council for his outstanding contribution to the development and visibility of his profession. Shaking hands with him is Éric Lavoie of the Ordre des agronomes du Québec.

HYDRO-QUÉBEC'S CONTRIBUTION TO THE QUÉBEC ECONOMY

	2009	2008
Dividends declared (\$M)	2,168	2,252
Capital tax (\$M)	132	202
Public utilities tax (\$M)	188	302
Water-power royalties (\$M)	567	546
Municipal, school and other taxes (\$M)	35	37
Loan guarantee fees paid to the shareholder (\$M)	174	167
Percentage of goods and services procured from Québec companies	87	89
Direct jobs supported by procurement, including procurement outside Québec (person-years)	12,333	11,462
Integrated Enhancement Program grants (\$M) ^a	1.7	0.2

a) Under the company's Integrated Enhancement Program, communities affected by major transmission projects receive grants equivalent to 1% of the capitalized cost of the facilities.

INTERNATIONAL INFLUENCE

On the international scene, Hydro-Québec is involved in the activities of a number of prestigious organizations such as the World Energy Council, International Hydropower Association (IHA), International Council on Large Electric Systems (CIGRÉ), e8 and Centre Jacques Cartier.

- > Under a research project on greenhouse gases (GHGs) coordinated by UNESCO and the IHA, Hydro-Québec organized a workshop on methods for measuring anthropogenic GHG emissions from artificial freshwater reservoirs. Specialists from 10 different countries took part in this workshop held in Montréal in September.
- > Since fall 2009, Hydro-Québec has headed up a working group of e8 experts on the technical, commercial and regulatory issues entailed by the introduction of electric vehicles onto the market.
- > In 2009, Hydro-Québec continued to play an active part in organizing the 21st World Energy Congress, which will be held in Montréal from September 12 to 16, 2010. The conference will revolve around

four main issues: the accessibility and availability of energy, the acceptability of energy solutions and the accountability of each of the players involved. As at the end of January 2010, more than 50 speakers from all over the world had confirmed their attendance.

- > In the sphere of cooperation, the Fonds Hydro-Québec pour la Francophonie financed 17 projects in 2009. Among other things, the fund
 - renewed the funding for an assistance program for Électricité d'Haïti and local communities in that country to encourage the use of clean energy, and established a similar program in Senegal,
 - renewed financial support for the Institut de l'énergie et de l'environnement de la Francophonie for its program to bolster its energy and environment capabilities,
 - funded a number of scholarships awarded to African representatives of the power industry under three energy-related training programs.

The Management's Discussion and Analysis should be read in conjunction with the Consolidated Financial Statements of Hydro-Québec and the notes thereto. The financial information and tabular amounts presented herein are expressed in Canadian dollars, unless otherwise indicated. The Consolidated Financial Statements take into account certain accounting practices that are specific to regulated enterprises. These practices are detailed in Note 3 to the Consolidated Financial Statements.

Hydro-Québec would like to point out that this analysis, and especially the Outlook section, contains statements based on estimates and assumptions concerning future results and the course of events. Given the risks and uncertainties inherent in any forward-looking statements, Hydro-Québec's actual future results could differ materially from those anticipated. It should also be noted that certain financial and operating data for previous years have been reclassified to respect the presentation adopted for the current year. Finally, the information contained herein takes into account any significant event that occurred on or before March 12, 2010.

OVERVIEW

Income from continuing operations totaled \$3,035 million, a \$23-million increase from the \$3,012 million recorded in 2008, despite a difficult business environment in 2009. On the one hand, a decrease in revenue from net electricity exports by Hydro-Québec Production, due to a drop in energy prices, was considerably mitigated by the application of hedging strategies based on the use of derivative instruments for wholesale market activities, and was thereby limited to \$226 million. On the other hand, the drop in aluminum prices led to a negative impact of \$254 million, or \$180 million more than in 2008, from special contracts signed with large industrial customers in Québec under conditions agreed to some 20 years ago. This impact was, however, more than offset by the positive effect, totaling \$391 million, or \$273 million more than in 2008, of hedging by the company on aluminum prices and exchange rates. These results demonstrate the effectiveness of our active management of market risks.

Strict control of operating expenses enabled us to keep them at a level comparable to 2007 and 2008 notwithstanding growth in operations; in addition, depreciation and amortization expense and capital tax decreased by \$122 million and \$70 million, respectively. Finally, it should be remembered that regulatory deferrals in 2008 led to the recognition of a \$129-million non-recurring regulatory asset for revenue variances related to climate conditions in 2006 and 2007.

Hydro-Québec did not record any income from discontinued operations in 2009, after recording \$129 million in this regard in 2008, chiefly because of a non-recurring gain of \$126 million related to the price adjustments provided for in the contract for the sale of the interest in Transelec, in Chile, concluded in 2006. Thus, 2009 net income corresponds to income from continuing operations, namely \$3,035 million, compared to net income of \$3,141 million in 2008.

Revenue totaled \$12,334 million, compared to \$12,717 million in 2008. Revenue from electricity sales amounted to \$12,055 million, versus \$12,364 million in 2008. This decrease is attributable to a \$413-million decline in revenue from electricity sales outside Québec, partly offset by a \$104-million increase in revenue from electricity sales in Québec.

Total expenditure amounted to \$6,900 million, or \$360 million less than in 2008. This decrease is due to reductions of \$199 million in electricity and fuel purchases, \$122 million in depreciation and amortization expense and \$70 million in capital tax as a result of a reduction in the tax rate. However, the change in regulatory deferrals compared to 2008 increased expenditure by \$102 million, taking into account the recognition, in June 2008, of a \$129-million regulatory asset for revenue variances related to climate conditions in 2006 and 2007.

Return on equity remained at a level comparable to 2008 despite a difficult business environment in 2009, totaling 14.3%, compared to 15.4% in 2008.

Cash from operations totaled \$4.8 billion. Among other things, this cash allowed us to pay the dividends of \$2,252 million declared for 2008 and to finance a major part of our investments. Our capital program reached \$4.3 billion in 2009, compared to \$4.0 billion in 2008, reflecting our continued involvement in several major projects in the Generation and Transmission segments, including the Eastmain-1-A/Sarcelle/Rupert hydroelectric development, which reached a milestone with the start of operation of the Rupert diversion in November, and the 1,250-MW interconnection with Ontario, which was officially inaugurated in September.

Dividends declared from 2005 to 2009 total \$10 billion, including \$2,168 million for 2009.

CONSOLIDATED RESULTS

Revenue totaled \$12,334 million, compared to \$12,717 million in 2008. Revenue from electricity sales decreased by \$309 million to \$12,055 million. Sales in Québec accounted for \$10,549 million of this amount, or \$104 million more than in 2008. On markets outside Québec, revenue from electricity sales totaled \$1,506 million, a decrease of \$413 million. Other revenue totaled \$279 million, compared to \$353 million in 2008. This \$74-million decrease was mainly due to a decline in revenue from natural gas sales following a drop in market prices.

The \$104-million increase in revenue from electricity sales in Québec resulted mainly from the April 1, 2008 and 2009, rate adjustments, which were partly offset by a decrease in industrial demand, counterbalanced to some extent by increased demand in the Residential and farm category. Revenue from special contracts with large industrial customers decreased by \$208 million, mainly due to a drop in aluminum prices. However, the derivative instruments used to manage risks related to aluminum prices and exchange rates generated a \$273-million positive impact. Risks related to special contracts are absorbed by Hydro-Québec Production.

The \$413-million decrease on markets outside Québec is due to a reduction in revenue from Hydro-Québec Production's exports.

Total expenditure was \$6,900 million, a decrease of \$360 million compared to 2008.

Operating expenses totaled \$2,521 million in 2009. Strict control of operating expenses enabled us to keep them at a level comparable to 2007 and 2008 notwithstanding growth in operations. The impact of indexation and inflation, net of efficiency gains, accounted for a \$40-million increase in operating expenses. Growth in operations, related mainly to the commissioning of Chute-Allard and Rapides-des-Cœurs generating stations, the expansion of the transmission and distribution systems and an increase in the number of customer accounts, resulted in a \$45-million increase. However, these factors were partly offset by a \$58-million decline in pension costs on account of the actuarial effect of higher long-term interest rates on capital markets.

Electricity and fuel purchases totaled \$1,207 million in 2009, as against \$1,406 million in 2008. This \$199-million decrease is mainly due to a reduction in the volume of electricity purchases made by Hydro-Québec Production.

Depreciation and amortization expense totaled \$2,214 million, a decrease of \$122 million from 2008. The difference is due to a \$255-million decrease in depreciation and amortization other than for regulatory assets and liabilities, mainly because of the revision of the useful life of some property, plant and equipment used for hydroelectric generation beyond 50 years. The expense related to regulatory assets and liabilities, recognized in accordance with the conditions established by the Régie de l'énergie, increased by \$133 million. First, amortization of the regulatory asset in connection with the net costs related to retirement of property, plant and equipment and intangible assets translated into a \$171-million increase. Moreover, amortization of the regulatory asset recognized in 2008 for revenue variances related to climate conditions resulted in a \$75-million increase. Finally, amortization of the regulatory asset related to the cost of native load transmission service decreased by \$139 million, totaling \$104 million in 2009, compared to \$243 million in 2008. It should be noted that amortization of these last items was taken into account in setting the electricity transmission and distribution rates that came into force in 2009.

GENERATION

Under the *Act respecting the Régie de l'énergie*, Hydro-Québec Production is required to provide Hydro-Québec Distribution with up to 165 TWh a year of heritage pool electricity, at an average price of 2.79¢/kWh. The division sells its excess output on deregulated markets in northeastern North America, including Québec, at market prices. It may also compete for contracts under Hydro-Québec Distribution's open tendering process.

The division operates 65 generating stations. Its capital projects serve a twofold objective: to ensure the long-term operability of existing facilities and to continue development of Québec's hydroelectric potential.

Operating results

Hydro-Québec Production recorded net income of \$2,214 million, which is stable compared to the \$2,230 million recorded in 2008, despite a difficult business environment in 2009. The decrease in revenue from net electricity exports, due to a drop in energy prices, was considerably mitigated by the application of hedging strategies based on the use of derivative instruments for wholesale market activities, and was thereby limited to \$226 million. Revenue from electricity sales to Hydro-Québec Distribution decreased by \$207 million, mainly as a result of lower demand from industrial customers in Québec, while electricity purchases decreased by \$63 million. Furthermore, the drop in aluminum prices led to a negative impact of \$254 million, or \$180 million more than in 2008, from special contracts signed with large industrial customers in Québec under conditions agreed to some 20 years ago. This impact was, however, more than offset by the positive effect, totaling \$391 million, or \$273 million more than in 2008, of hedging by the company on aluminum prices and exchange rates. Transmission system reservation costs paid to Hydro-Québec TransÉnergie increased by \$56 million, while depreciation and amortization expense and capital tax decreased by \$267 million and \$40 million, respectively.

Electricity sales in Québec

SALES TO HYDRO-QUÉBEC DISTRIBUTION

In 2009, the total volume of electricity sales to Hydro-Québec Distribution was 164.2 TWh, compared to 170.2 TWh in 2008, for a decrease of 6.0 TWh. Revenue generated by these sales decreased by \$207 million to \$4,632 million, mainly due to a reduction in industrial demand related to the difficult business environment in 2009.

SPECIAL CONTRACTS BETWEEN HYDRO-QUÉBEC DISTRIBUTION AND LARGE INDUSTRIAL CUSTOMERS

The risks inherent in Hydro-Québec Distribution's special contracts are absorbed by Hydro-Québec Production. Revenue from Hydro-Québec Distribution's special contracts with large industrial customers in Québec decreased by \$208 million for a total of \$743 million, mainly because of a nearly 40% decrease in the market price of aluminum in 2009. The negative impact prior to hedging totaled \$254 million, or \$180 million more than in 2008.

However, hedging operations carried out by the company, as part of its risk management strategy related to aluminum prices and exchange rates, generated a \$391-million positive impact, or \$273 million more than in 2008.

Breakdown of 2009 Investments by Hydro-Québec Production

Electricity sales outside Québec

Electricity sales outside Québec generated revenue of \$1,495 million for 23.0 TWh in 2009, compared to \$1,897 million for 21.1 TWh in 2008. Short-term electricity sales earned \$1,239 million for 20.4 TWh, compared to \$1,677 million for 18.6 TWh in 2008.

Net electricity exports earned \$1,258 million in 2009 for a net reservoir drawdown of 18.5 TWh, compared to \$1,484 million for 15.2 TWh in 2008. This represented a unit contribution of 6.8¢/kWh in 2009 against 9.8¢/kWh in 2008. It should be remembered that in 2008, Hydro-Québec Production had benefited from particularly favorable market conditions.

As at December 31, 2009, reservoir storage stood at 112.9 TWh, compared to 116.5 TWh a year earlier. This slight decrease is due to the fact that natural water inflows were below the normal level by approximately 2 TWh. It should be noted that the present level is more than sufficient to meet the criteria set for management of risks related to security of energy supply.

Electricity and fuel purchases

Electricity and fuel purchases totaled \$1,043 million in 2009, a decrease of \$234 million from 2008, due to a drop in market prices for energy and a reduction in purchase volume. Specifically, short-term purchases for export amounted to \$223 million for 3.7 TWh, compared to \$380 million for 5.2 TWh in 2008. Transmission system reservation costs paid to Hydro-Québec TransÉnergie increased by \$56 million, mainly because of the higher volume of sales outside Québec.

Depreciation and amortization

Depreciation and amortization expense totaled \$510 million compared to \$777 million in 2008, a decrease of \$267 million. The difference stems primarily from the revision of the useful life of some property, plant and equipment used for hydroelectric generation beyond 50 years.

Investing activities

Investments in property, plant and equipment and intangible assets affecting cash totaled \$2,066 million in 2009. Of this amount, \$1,422 million went to development activities, including work on Eastmain-1-A/Sarcelle/Rupert (with the start of operation of the Rupert diversion in 2009), Chute-Allard and Rapides-des-Cœurs (where the last eight generating units were commissioned in 2009), and Romaine.

Hydro-Québec Production also invested \$644 million in rehabilitating and refitting its facilities. Most of this amount was earmarked for engineering work and planning and procurement activities related to the refurbishment of Gentilly-2 nuclear generating station, along with rehabilitation work at La Tuque, Beauharnois and Paugan generating stations.

In December, the division also invested \$0.6 billion as part of Hydro-Québec's acquisition (through its subsidiary HQ Manicouagan inc.) of a 60% interest in Manicouagan Power Limited Partnership, which owns and operates a hydroelectric generating station (McCormick) located on the Rivière Manicouagan.

DISTRIBUTION

Hydro-Québec Distribution

□ Hydro-Québec division

Hydro-Québec Distribution provides electricity to the Québec market and delivers reliable power and quality services to its customers with a view to efficiency and sustainable development. In this context, it also promotes energy-saving measures among its customers.

The division's activities are regulated by the Régie de l'énergie, which has exclusive jurisdiction to set electricity rates.

Rate cases

In March 2009, the Régie approved an across-the-board rate increase of 1.22%, effective April 1, 2009. In March 2010, it approved an across-the-board rate increase of 0.4% for 2010–2011.

Supplying the Québec market

Hydro-Québec Distribution relies on various sources to supply the Québec market. To meet requirements in excess of the heritage pool (165 TWh) reserved for it by Hydro-Québec Production, the division issues short- and long-term calls for tenders. For requirements of less than three months, it may also buy electricity directly on the market, without tendering, under an exemption granted by the Régie de l'énergie. For unforeseen needs that cannot be met otherwise, the division relies on a framework agreement with Hydro-Québec Production. Since the previous agreement expired on December 31, 2008, the two divisions signed a new agreement covering the period from January 1, 2009, to December 31, 2013, which was approved by the Régie de l'énergie in 2009.

In 2009, Hydro-Québec Distribution filed a second progress report with the Régie de l'énergie on the Electricity Supply Plan 2008–2017. The report presented a significant downward revision in the forecast of the electricity needs of the Québec market, especially in the industrial category, given the economic context.

To balance supply and demand, Hydro-Québec Distribution signed an agreement with TransCanada Energy to suspend, for 2010, the deliveries of power provided for in the contract with this supplier. Approved by the Régie de l'énergie in September 2009, the agreement can be renewed on an annual basis, subject to the Régie's approval.

The Saint-Ulric–Saint-Léandre wind farm made its first deliveries in November 2009. Combined with the supply from the wind farms at L'Anse-à-Valleau, Baie-des-Sables and Carleton, this brings the division's wind power purchases to some 1.5 TWh per year, for an installed capacity of 447 MW.

Finally, Hydro-Québec Distribution is continuing its efforts to promote energy efficiency. In 2009, its programs generated new energy savings of 0.9 TWh, for a total of 4.3 TWh of annual savings achieved to date. The division has a target of 11 TWh by 2015.

Operating results

Hydro-Québec Distribution recorded net income of \$365 million, compared to \$388 million in 2008. This \$23-million decrease is mainly due to the recognition, in June 2008, of a \$129-million regulatory asset for revenue variances related to climate conditions in 2006 and 2007. The effect of this non-recurring item was partly offset by an increase in revenue from electricity sales, a net decrease in electricity purchases and transmission costs, and a reduction in capital tax. There was also a positive variance in regulatory deferrals related to supply costs for electricity in excess of the heritage pool. A \$31-million regulatory liability was recorded in this regard in 2009, compared to a \$58-million liability in 2008.

Electricity sales in Québec

Electricity sales revenue totaled \$10,541 million, an increase of \$101 million over 2008. The rate adjustments that came into effect on April 1, 2008 and 2009, which, among other things, enabled the division to absorb the net costs related to the retirement of property, plant and equipment and intangible assets and to recover part of the regulatory asset charged to the revenue variance account related to climate conditions, had a positive impact on revenue. However, the decrease in industrial demand, which was partly offset by increased demand in the Residential and farm category, reduced revenue. Revenue from special contracts with large industrial customers decreased by \$208 million, mainly because of the drop in aluminum prices. However, the derivative instruments used to manage risks related to aluminum prices and exchange rates generated a \$273-million positive impact. Risks related to special contracts are absorbed by Hydro-Québec Production.

Sales volume was 165.1 TWh, a decrease of 5.2 TWh from 170.3 TWh in 2008, mainly the result of a decline in baseload demand (-4.4 TWh). Sales to industrial customers declined by 5.7 TWh because of the economic slowdown in the pulp and paper and smelting and refining sectors. In contrast, sales in the Residential and farm category increased by 2.2 TWh, mainly because of growth in the number of customer accounts and in the number of households converting to electric heating.

ELECTRICITY SALES IN QUÉBEC BY CATEGORY

Customer category	Sales volume			Sales revenue		
	2009 TWh	2009–2008 change		2009 \$M	2009–2008 change	
	TWh	TWh	%	\$M	\$M	%
Residential and farm	62.5	1.8	3.0	4,500	200	4.7
General and institutional	34.1	(1.1)	(3.1)	2,662	(25)	(0.9)
Industrial	63.3	(5.9)	(8.5)	3,092	(82)	(2.6)
Other	5.2	–	–	287	8	2.9
Total	165.1	(5.2)	(3.1)	10,541	101	1.0

FACTORS IN THE 2009–2008 CHANGE IN SALES BY CATEGORY

Customer category	Volume effects							Price effects			Total
	TWh	Baseload demand		Temperature		February 29		Total	Rate adjustments	Other	
\$M		TWh	\$M	TWh	\$M	\$M	\$M				\$M
Residential and farm	2.2	145	(0.1)	–	(0.3)	(18)	127	85	(12)	73	200

CORPORATE AND OTHER ACTIVITIES

**Breakdown of 2009 Revenue –
Groupe des ressources humaines
et des services partagés**

This heading includes corporate activities, the Groupe des ressources humaines et des services partagés, the Groupe de la technologie and the subsidiary Hydro-Québec International.

Results

Corporate and Other Activities recorded net income of \$9 million in 2009, compared to \$85 million in 2008. The decrease is mainly due to the recognition, in 2008, of a non-recurring gain of \$126 million related to the price adjustments provided for in the contract for the sale of the interest in Transelec, in Chile, concluded in 2006.

Corporate activities

Corporate activities consist of financial services, which are divided into two departments, and corporate affairs.

The Vice-présidence à la comptabilité et au contrôle is responsible for overseeing accounting (financial, regulatory and management), internal control and taxation. It also has the task of producing and analyzing the consolidated financial statements. Its other duties include financial planning and risk management.

The Vice-présidence au financement, à la trésorerie et à la caisse de retraite is in charge of meeting the company's financing requirements, managing its treasury and maintaining relations with Hydro-Québec bondholders and rating agencies. It also acts as trustee of Hydro-Québec's pension plan.

The Groupe des affaires corporatives et du secrétariat général provides support services and strategic consulting in the areas of communications, public affairs, environment, ethics and government relations. It is also responsible for services and expertise related to legal affairs as well as safety and security of persons and property. It also coordinates strategic planning and the company's contribution to the electrification of ground transportation. Finally, this group acts as Secretary to the Board of Directors and the Board committees at Hydro-Québec and its subsidiaries.

Groupe des ressources humaines et des services partagés

The Groupe des ressources humaines et des services partagés develops strategies, guidelines, frameworks, corporate programs and objectives in matters pertaining to human resources, procurement and services common to the entire company. Its mission includes ensuring that Management can count on optimum human resources conditions and providing products and advisory services in this area, including company-wide training. In addition, its Centre de services partagés provides divisions and corporate units with support services, at least cost and adapted to their needs, so that they can focus on their core activities. These services include procurement of goods and services, property management, accounting services, document management, material management and transportation services.

The group's revenue totaled \$580 million in 2009, compared to \$562 million in 2008, a 3% increase.

OUTLOOK

In 2010, Hydro-Québec expects to earn net income of \$2.4 billion entirely from continuing operations. This projection is consistent with the 2010 outlook of the *Strategic Plan 2009–2013*.

Hydro-Québec plans to invest close to \$5 billion in 2010. More than 50% of this amount will be devoted to development and growth activities and to the Energy Efficiency Plan. The remainder will go toward facility maintenance and improvements.

Hydro-Québec Production will continue its major hydroelectric development projects, including concreting and construction at the Eastmain-1-A and Sarcelle jobsites in the Baie-James region, as well as building the road and the first structures at Romaine-2 in the Minganie region. It also began draft-design studies in fall 2009 to build a complex on the Petit Mécatina, some 250 km east of the Romaine. In addition, the division will carry on with engineering work and planning and procurement activities related to the refurbishment of Gentilly-2 nuclear generating station.

Hydro-Québec TransÉnergie will invest a considerable amount in development to integrate new hydroelectric and wind capacity in Québec. It will therefore continue connecting new hydroelectric and wind power facilities, in particular Eastmain-1-A and Sarcelle powerhouses and the wind farms built in response to Hydro-Québec Distribution's calls for tenders. The division will also continue to invest in maintenance and improvement activities in order to ensure the reliability and long-term operability of its transmission assets and enhance service quality. These activities include the project to upgrade the bulk transmission system, which involves boosting system performance and reinforcing the supply of energy to major load centres in order to reduce energy losses and make system management more flexible.

Hydro-Québec Distribution will continue to deliver reliable power and high-quality services to its Québec customers. It will continue investing to handle the growth of its Québec customer base and to maintain and improve its facilities, especially those involved in grid automation. It will also continue to implement the Energy Efficiency Plan, which includes measures for low-income households, to achieve the objective of 11 TWh in energy savings set for 2015. In addition, it will commission the new Kuujuaq thermal generating station to replace the existing one.

INTEGRATED ENTERPRISE RISK MANAGEMENT

For several years, Hydro-Québec has applied an integrated enterprise risk management process that is now part of its ongoing business practices. This process is supported by various control, communication and assessment mechanisms that enable it to monitor risk developments on a dynamic basis.

Hydro-Québec's divisions and corporate units are central to the process. As part of their ongoing activities, they manage the risks to which they are exposed and reassess them on a regular basis, daily in some cases. In concrete terms, each division or corporate unit must determine and assess its main risks and then develop and apply mitigation measures to ensure that residual risks are at a level acceptable to Hydro-Québec. During the annual planning process, this exercise results in a consolidated portfolio of enterprise risks. This portfolio is presented to the Board of Directors with the Strategic Plan or the annual Business Plan, which include an analysis of the sensitivity of net income to the principal risks. The divisions and corporate units report on their risk management follow-up and activities to the Management Committee, which then acts as a risk management committee to oversee risk.

ANNUAL INTEGRATED RISK MANAGEMENT PROCESS

		January 1	April 30	August 31	December 31
		1st four-month period		2nd four-month period	
				3rd four-month period	
				Business Plan	Strategic Plan
Hydro-Québec Units	Division or group monitoring plans covering main business risks				
	Division or group risk management reports – April review in the form of highlights		Division or group risk management reports – August review in the form of highlights		
			Identification of risks and validation by division/group president	Preparation or revision of division or group business risk portfolios – Supporting documents for evaluation	
Hydro-Québec Management	Management Committee and Segment Committees (in risk management mode)		Management Committee and Segment Committees (in risk management mode)	Management Committee and Segment Committees (in risk management mode)	
	Review of risk management reports		Review of risk management reports	Review of each division's or group's risk portfolio and discussion	
				Management Committee acting as the Risk Management Committee with the President and CEO as CRO	
Board of Directors				Finance Committee	
				Presentation of consolidated enterprise risk portfolio, risk map, probability of reaching net income	
				Audit Committee	
				President and CEO's report on integrated enterprise business risk management process	
			Board of Directors		
			Presentation of consolidated enterprise risk portfolio, risk map, probability of reaching net income		

Financial risks

In the course of its operations, Hydro-Québec carries out transactions that expose it to certain financial risks, such as market and credit risk. Rigorous follow-up and the adoption of strategies that include the use of derivative instruments considerably reduce exposure to such risks and their impact on results.

Market risk

Hydro-Québec's results are subject to different types of market risk associated mainly with fluctuations in the Canadian dollar's exchange rate compared to the U.S. dollar as well as fluctuations in interest rates and aluminum prices. Exchange rate fluctuations affect revenue from sales denominated in U.S. dollars as well as the cost of U.S. dollar-denominated debt and swaps. Interest rate fluctuations affect financial expenses, pension costs and the authorized return on equity of regulated divisions. Aluminum price fluctuations have an impact on the revenue from special contracts with large industrial customers in Québec.

The three types of market risk are subject to active integrated management, in particular through derivative financial products. The purpose of such management is to limit the impact of market risk on Hydro-Québec's short-term results, according to strategies and criteria established based on the company's risk tolerance. Furthermore, Hydro-Québec can count on certain offsetting factors that mitigate its market risk over the medium and long term. For example, it holds debt and swaps denominated in U.S. dollars as a hedge against sales in that currency. The effect of exchange rate fluctuations on sales is thus offset by exchange gains or losses on debt in U.S. dollars. There is also an offsetting effect between the impact of a general increase or decrease in interest rates on financial expenses, on the one hand, and the impact of such an increase or decrease on pension costs and the authorized return on equity of regulated divisions, on the other.

Credit risk

Credit risk is the risk that a counterparty may not meet its contractual obligations. Hydro-Québec is exposed to credit risk related to receivables through ongoing energy sales in Québec. These sales are billed at rates that provide for cost recovery according to conditions approved by the Régie de l'énergie. The company is also exposed to credit risk related to the cash equivalents, short-term investments and derivative instruments traded with financial institutions and other issuers and, to a lesser extent, with North American energy companies under Hydro-Québec Distribution supply contracts and Hydro-Québec Production energy transactions on markets outside Québec.

Exposure to credit risk is mitigated by the implementation of limits and frameworks for risk concentration and level of exposure by counterparty. To ensure compliance with such limits and frameworks, Hydro-Québec takes a proactive approach based on various controls and monitoring reports. These enable it to react quickly to any event that could have an impact on the financial condition of its counterparties. In addition, the company generally does business with counterparties that have a high credit rating. It also enters into agreements to limit the market value of the main portfolios of derivative instruments.

Operational risks

Generation

One of the principal uncertainties that Hydro-Québec faces relates to natural water inflows. Hydro-Québec Production must ensure that it is able to meet its commitments to supply the annual heritage pool of 165 TWh to Hydro-Québec Distribution and fulfill its contractual obligations. In concrete terms, this means being able to cover a natural inflow deficit of 64 TWh over two consecutive years, and 98 TWh over four consecutive years. To meet this requirement, the division applies a variety of mitigation measures and closely monitors them. It therefore manages its reservoir storage on a multiyear basis and maintains an adequate margin between its generating capacity and its commitments. This allows the division to compensate for variations in runoff, replenish its energy reserve or take advantage of business opportunities. Hydro-Québec regularly reports to the Régie de l'énergie on Hydro-Québec Production's generating capacity and energy reserve.

Beyond runoff uncertainties and credit risk, Hydro-Québec Production's wholesaling activities are subject to market risk and the risk of unavailability of generation and transmission equipment. Market risk results from fluctuations in electricity and fuel prices, and is mitigated by ongoing monitoring of trends in wholesale markets and the use of hedging derivative instruments. The risk of unavailability of generation and transmission equipment is maintained at a level deemed acceptable through maintenance and upgrade programs.

The risks related to Hydro-Québec Production's marketing activities are quantified in an integrated fashion by a team of specialists that is independent of the group carrying out the transactions. This team sees to the application of controls, presents daily reports to Senior Management and ensures compliance with the limits approved by Management and the Board of Directors.

Transmission

Several factors, such as extreme weather and equipment failure, may cause service interruptions or result in the unavailability of part of the transmission system. The multifaceted strategy adopted by Hydro-Québec TransÉnergie to prevent these problems includes implementing the standards of the North American Electric Reliability Corporation (NERC) and the Northeast Power Coordinating Council (NPCC), as well as measures to maintain and improve transmission facilities and extend their useful life. In 2007, the Régie de l'énergie confirmed the reliability expertise of Hydro-Québec TransÉnergie by designating its Direction du contrôle des mouvements d'énergie (CMÉ), the unit responsible for system control, as Reliability Coordinator for Québec. In this capacity, the CMÉ filed the reliability standards applicable to generation facilities and transmission systems in Québec, as well as a register of entities subject to these standards, with the Régie in June 2009.

Over the next few years, Hydro-Québec TransÉnergie must ensure adequate transmission capacity to supply Hydro-Québec Distribution and other customers, as well as transmission system security and reliability. To do so, the division relies, among other things, on a strategy of ensuring long-term operability of transmission assets and on optimal management of annual peak load.

Distribution

Hydro-Québec Distribution is responsible for supplying electricity to the Québec market. The division's activities are subject to uncertainty related to fluctuations in demand (under normal climate conditions) due to the economic situation, which has an impact on results. When demand is lower than the forecasts made in the rate application, Hydro-Québec Distribution cannot recover from customers all the costs related to power distribution, power transmission through the Hydro-Québec TransÉnergie system and customer service. To counter this risk, the division constantly fine-tunes its method of forecasting short-term demand.

In addition, Hydro-Québec Distribution applies a series of measures to ensure long-term operability of the distribution system, and hence service quality. These measures include compliance with applicable standards for overhead and underground systems, the implementation of an asset maintenance program and a strategy for asset renewal, as well as vegetation control.

In order to promote better energy use, the division is also pursuing its efforts in the area of energy efficiency.

Construction

Strong demand in the area of civil engineering and market-specific inflation may have an impact on current and future project costs. That is why Hydro-Québec has developed strategies to mitigate the impact of economic conditions on procurement and on project completion. Moreover, it applies strict management to contain costs but still meet deadlines, its high standards of quality and safety, and the requirements of each project.

Corporate and Other Activities

Environmental protection and conservation are a central concern of Hydro-Québec. Most activities that have a significant impact on the environment are governed by an ISO 14001-certified environmental management system. In addition, every year, the company reviews its management of environmental issues and details them in its Sustainability Report.

Hydro-Québec is also concerned with information security and the risks associated with confidentiality and with the loss of availability or integrity of systems and data as a result of malicious acts, error or natural disaster. It regularly assesses how well its information systems are protected against these threats and implements the necessary security measures. These measures include an information and communication technologies security program, an antivirus expertise centre, Internet filtering, a security monitoring centre, managing of identities and access, and managing of incidents and vulnerabilities.

Finally, Hydro-Québec has a corporate emergency response plan to ensure the continuity of its operations and its mission in case of an exceptional event. The plan defines the material, technical and organizational means required to restore electrical service. It also provides for effective coordination of all internal and external responders, including public authorities.

Changeover to International Financial Reporting Standards

On February 13, 2008, the Canadian Accounting Standards Board confirmed that the full changeover to International Financial Reporting Standards (IFRS) will take effect for interim and annual financial statements relating to fiscal years beginning on or after January 1, 2011, with comparative information presented for fiscal 2010. On October 28, 2009, the Public Sector Accounting Board confirmed that public sector enterprises such as Hydro-Québec will be required to follow IFRS for periods beginning January 1, 2011.

Like Canadian generally accepted accounting principles (GAAP), IFRS is a single, summary set of standards based on professional judgment. Since 2005, they have been applied in about 100 countries around the world, primarily in the European Union and Australia. Japan and China are also implementing an IFRS convergence plan.

Hydro-Québec has prepared an IFRS conversion plan and set up a work team to complete this task. In 2009, it completed the first phase of the conversion, namely the diagnostic study. Through this study, the main differences between Canadian GAAP and IFRS were established and IFRS implementation strategies were devised. The other phases are continuing on schedule. To date, the main issues identified have to do with property, plant and equipment, regulatory accounting practices and employee future benefits. These issues were taken into consideration in preparing the *Strategic Plan 2009–2013*.

The company will adopt IFRS as required as at January 1, 2011. In order to make the transition more seamless, the following schedule has been drawn up:

2008	2009	2010	2011
Diagnostic study	Diagnostic study (completion) Systems modification Disclosure (sample financial statements and complete review of the notes to financial statements) Preparation of an employee training plan	Preparation of 2010 comparative data in accordance with IFRS Employee training	Changeover to IFRS (disclosure of 2010 comparative data in accordance with IFRS)

Hydro-Québec examines all proposed and current drafts of the International Accounting Standards Board, particularly the one concerning rate-regulated activities, and evaluates the impacts of these drafts on its IFRS changeover plan.

Hydro-Québec's consolidated financial statements and all additional information contained in this Annual Report are the responsibility of Management and are approved by the Board of Directors. The consolidated financial statements have been prepared by Management in accordance with Canadian generally accepted accounting principles and take into account the decisions handed down by the Régie de l'énergie with respect to the transmission and distribution of electricity. They include amounts determined based on Management's best estimates and judgment. Financial information presented elsewhere in the Annual Report is consistent with the information provided in the consolidated financial statements.

Management maintains an internal control system which includes communicating Hydro-Québec's code of ethics and code of conduct to employees, primarily to ensure the proper management of resources and the orderly conduct of business. The objective of this system is to provide reasonable assurance that the financial information is pertinent and reliable and that the assets of Hydro-Québec are adequately recorded and safeguarded. An internal auditing process allows evaluation of the sufficiency and effectiveness of control, as well as of Hydro-Québec's policies and procedures. Recommendations ensuing from this process are submitted to Management and the Audit Committee.

The Board of Directors is responsible for corporate governance. It assumes its responsibility for the consolidated financial statements principally through its Audit Committee, composed solely of independent directors, who do not hold full-time positions within Hydro-Québec or in one of its subsidiaries. The Audit Committee's mandate is to ensure that the consolidated financial statements present fairly Hydro-Québec's financial position, the results of its operations, its cash flows and its comprehensive income, and to recommend the financial statements to the Board of Directors for approval. The Audit Committee meets regularly with Management, the Internal Auditor and the external auditors to discuss the results of their audits and the resulting findings with respect to the integrity and the quality of Hydro-Québec's financial reporting as well as the effectiveness of its internal control system. The Internal Auditor and the external auditors have full and unrestricted access to the Audit Committee, with or without Management present.

The external auditors are appointed by the Québec government, the sole shareholder of Hydro-Québec. The 2009 and 2008 consolidated financial statements have been audited jointly by the external auditors, KPMG LLP and Ernst & Young LLP.

Michael L. Turcotte
Chairman of the Board

Thierry Vandal
President and Chief Executive Officer

Lise Croteau
Vice President –
Accounting and Control

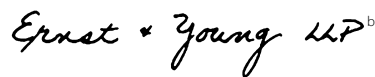

Montréal, Québec
February 5, 2010

To the Minister of Finance of Québec:

We have audited the consolidated balance sheets of Hydro-Québec as at December 31, 2009 and 2008, and the consolidated statements of operations, retained earnings, cash flows and comprehensive income for the years then ended. These financial statements are the responsibility of Hydro-Québec's Management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by Management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of Hydro-Québec as at December 31, 2009 and 2008, and the results of its operations and its cash flows for the years then ended, in accordance with Canadian generally accepted accounting principles. As required by the *Auditor General Act* (R.S.Q., c. V-5.01), we report that, in our opinion, except for the application of changes in accounting policies described in Note 2 to the consolidated financial statements, these principles have been applied on a basis consistent with that of the preceding year.

Financial instruments

Financial instruments are measured at fair value on initial recognition. Their measurement in subsequent periods and the recognition of any changes in fair value depend on the category in which they are classified.

The following table presents the classification of financial instruments in the various categories:

Category	Financial Instruments
Financial assets and liabilities held for trading Designated	Cash equivalents (with initial maturities of three months or less)
Classified	Derivative instruments
Available-for-sale financial assets	Short-term investments (maturing in more than three months)
Loans and receivables	Accounts receivable and other receivables Government reimbursement for the 1998 ice storm (presented in Other assets)
Other financial liabilities	Borrowings Accounts payable and accrued liabilities Dividends payable Accrued interest Current portion of long-term debt Long-term debt Perpetual debt

Financial assets and liabilities are offset when certain criteria are met. The net amount is therefore reported in the balance sheet when Hydro-Québec has a legally enforceable right to set off the recognized amounts and it intends either to settle on a net basis, or to realize the asset and settle the liability simultaneously.

Financial assets and liabilities held for trading are recorded at fair value at the balance sheet date. Gains and losses arising from changes in fair value are recognized in operations for the period during which they occur, except in the case of derivative instruments designated as hedges in a cash flow hedging relationship.

Available-for-sale financial assets are recorded at fair value at the balance sheet date. Changes in fair value are recorded in Other comprehensive income until they are realized, at which time they are reclassified to operations. Commodity futures that can be settled net in cash are recorded at the date of settlement if there is a probability of delivery or receipt in accordance with expected needs.

Loans and receivables, less any impairment losses, as well as other financial liabilities are measured at amortized cost using the effective interest method.

As part of its integrated enterprise risk management, Hydro-Québec uses various financial instruments to manage its market risk, consisting of currency risk, interest rate risk and risk resulting from

fluctuating energy and commodity prices. Hydro-Québec applies cash flow or fair value hedge accounting to the eligible hedging relationships. It formally documents all relationships between hedging instruments and hedged items. This process involves associating all derivative instruments with specific assets and liabilities on the balance sheet, or with probable anticipated transactions. Hydro-Québec also measures the effectiveness of hedging relationships initially and then monthly thereafter.

In the case of a cash flow hedge, the effective portion of changes in the fair value of an instrument designated as a hedge is recognized under Other comprehensive income, and the gains and losses related to the ineffective portion are immediately recognized in operations, under the same line item as the hedged item. Amounts included in Accumulated other comprehensive income are reclassified to operations, also under the same caption as the hedged item, during the periods in which the change in cash flows attributable to the hedged item affects operations. If a derivative instrument no longer satisfies hedging conditions or is sold or liquidated, or if Hydro-Québec terminates its designation as a hedging item, hedge accounting ceases to be applied on a prospective basis. Previously recognized gains and losses are carried forward to be recognized in operations during the same period as the hedged item. If the hedged item ceases to exist, the unrealized gains or losses are immediately reclassified to operations.

In the case of a fair value hedge, the derivative instrument is recorded at fair value, and changes in the fair value, including those related to the ineffective portion of the hedge, are recognized in operations under the same line item as the hedged item. Changes in the fair value of the hedged item attributable to the hedged risk are recognized as adjustments to the hedged item's carrying amount and are offset against operations.

In addition, an embedded derivative must be separated from its host contract and recorded at fair value on the balance sheet under certain conditions. Hydro-Québec has opted to apply this accounting treatment to all host contracts issued, acquired or substantively amended on or after January 1, 2003.

Hydro-Québec must classify the fair value measurements of financial instruments according to a hierarchy of three levels, based on the type of inputs used in making these measurements:

- Level 1: Quoted prices in active markets for identical instruments;
- Level 2: Significant inputs and value drivers that are observable in active markets; and
- Level 3: One or more significant inputs or one or more significant value drivers that are not observable.

Cash equivalents, short-term investments and derivative instruments are recognized at fair value.

Except for measurements of exchange-traded derivative instruments, which are Level 1 measurements, financial instrument measurements are Level 2 measurements. Fair value is obtained by discounting future cash flows, which are estimated on the basis of the spot rates or the forward rates or prices in effect on the balance sheet date and take into account the credit risk assessment. The valuation techniques make use of observable market data.

Note

Depreciation and Amortization

	2009	2008
Property, plant and equipment ^a	1,684	1,820
Intangible assets	97	126
Regulatory assets and liabilities	419	286
Deferred charges	–	5
Write-offs	14	99
	2,214	2,336

a) Revision of the useful life of property, plant and equipment resulted in a \$170-million decrease in the depreciation and amortization expense (\$71 million in 2008). For some property, plant and equipment used for hydroelectric generation, this revision was carried out in 2009 and resulted in the increase of the maximum amortization period from 50 to 100 years.

a) The additions for the year totaled \$61 million as at December 31, 2009 (\$69 million as at December 31, 2008), including \$56 million (\$64 million as at December 31, 2008) in internal development costs.

b) The amount indicated is the fair value of the water-power rights upon allocation of the purchase price of the Manicouagan Power Limited Partnership. Information concerning this acquisition is presented in Note 16, Acquisition and Disposal of Interests.

	Note	2009	2008
Accrued benefit assets	21	1,736	1,133
Deferred charges		89	91
Government reimbursement for the 1998 ice storm ^a		71	90
Nuclear fuel waste management trust fund ^b		60	50
		1,956	1,364

a) Payable in quarterly installments of \$6 million until January 15, 2014, and a final installment of \$1 million on April 15, 2014. These installments include interest at an annual rate of 7.2%. The current portion, presented under Accounts receivable and other receivables, totaled \$20 million as at December 31, 2009 (\$19 million as at December 31, 2008). The fair value of this financial asset, including the current portion, was \$100 million as at December 31, 2009 (\$126 million as at December 31, 2008).

b) On November 15, 2002, the *Nuclear Fuel Waste Act* came into force. Under this Act, nuclear energy corporations in Canada were required to set up a waste management organization whose role would be to propose a long-term approach for managing spent nuclear fuel to the Government of Canada. Nuclear energy corporations were also required to set up a trust fund to finance the costs of long-term nuclear fuel waste management. In November 2005, the Nuclear Waste Management Organization (NWMO) filed its report with the Government of Canada and recommended an approach which was adopted in June 2007.

In October 2007, the members of the NWMO ratified an agreement that sets forth a formula for financing the costs of long-term nuclear fuel waste management. This formula, approved by the Canadian Minister of Natural Resources in April 2009, is used to determine each member's share for the coming years, based on the number of spent nuclear fuel bundles produced at a given date. It also takes into account the date on which each member plans to start shipping spent nuclear fuel bundles to the future national repository site.

Fair value

As at December 31, 2009, the fair value of the long-term debt, including the current portion, amounted to \$46,678 million (\$46,166 million as at December 31, 2008). Including debt-related swaps, total indebtedness stood at \$47,514 million (\$46,950 million as at December 31, 2008). Fair value is obtained by discounting future cash flows, based on forward interest rates derived from interest rates at the close of business on the balance sheet date for similar instruments available on capital markets. Changes in fair value reflect sensitivity to capital market interest rates. However, Management's primary intention is to hold these debt securities until maturity.

Standby credit

Hydro-Québec has undrawn standby credit facilities of US\$2,000 million, composed of two tranches, one of US\$360 million and the other of US\$1,640 million, which will expire in 2012 and 2013, respectively. Any borrowings will bear interest at a rate based on the London Interbank Offered Rate (LIBOR). A US\$750-million swing loan at the U.S. base rate is included in the US\$2,000-million credit facility.

Liabilities arising from asset retirement obligations relate to the cost of dismantling Gentilly-2 nuclear generating station at the end of its useful life, the removal of spent nuclear fuel resulting from its operation, and the dismantling of certain fuel tanks, transmission substations and thermal generating stations.

In 2008, the Board of Directors approved the project to refurbish Gentilly-2 generating station, which will extend its useful life by 28 years. Therefore, the main assumptions for calculating the obligation related to the dismantling of Gentilly-2 generating station at the end of its useful life were revised in 2008, resulting primarily

in a 28-year deferral of the expected timing for the settlement of the obligation.

Hydro-Québec has also identified asset retirement obligations relating to thermal generating stations and transmission substations and lines for which no liability has been recognized since it expects to use these assets for an undetermined period. These relate to property, plant and equipment for which Hydro-Québec does not have sufficient information to accurately establish a schedule for the obligations. A liability resulting from these asset retirement obligations will be recognized in the period in which there is sufficient information to establish such a schedule.

The aggregate carrying amount of the asset retirement obligations is as follows:

				2009
	Dismantling of nuclear generating station ^a	Removal of spent nuclear fuel ^a	Dismantling of other assets	Total
Balance, beginning of year	129	155	16	300
Liabilities incurred	–	2	3	5
Accretion expense	9	14	2	25
Liabilities settled	–	(1)	(2)	(3)
Revision of estimated cash flows and expected timing of payments	47	–	(3)	44
Balance, end of year	185	170	16	371

				2008
	Dismantling of nuclear generating station ^a	Removal of spent nuclear fuel ^a	Dismantling of other assets	Total
Balance, beginning of year	306	141	17	464
Liabilities incurred	–	2	–	2
Accretion expense	15	13	1	29
Liabilities settled	–	(1)	(2)	(3)
Revision of estimated cash flows and expected timing of payments	(192) ^b	–	–	(192)
Balance, end of year	129	155	16	300

a) The Québec government has provided an irrevocable financial guarantee of up to \$685 million to the Canadian Nuclear Safety Commission (CNSC) for the performance of Hydro-Québec's obligations with regard to the cost of dismantling Gentilly-2 nuclear generating station at the end of its useful life and the removal of spent nuclear fuel. This financial guarantee is required under the CNSC licence issued to Hydro-Québec for operation of the generating station until December 31, 2010. Hydro-Québec will seek renewal of this licence upon its expiry.

b) The decrease in the carrying amount of the obligation in 2008 is mainly due to the deferral of the dismantling of Gentilly-2 generating station.

The carrying amount of the asset retirement obligations is based on the following key assumptions:

	Dismantling of nuclear generating station	Removal of spent nuclear fuel	Dismantling of other assets
Estimated cash flows (in constant dollars) required to settle the obligations ^a			
As at December 31, 2009	914	598	16
As at December 31, 2008	761	598	17
Expected timing of payment of the cash flows required to settle the obligations			
As at December 31, 2009	Between 2040 and 2071	Between 2010 and 2159	Between 2010 and 2031
As at December 31, 2008	Between 2040 and 2071	Between 2009 and 2159	Between 2009 and 2031
Credit quality-adjusted, risk-free rate at which the estimated cash flows have been discounted (%)			
Initial recognition of obligations	6.4	6.4	Between 3.3 and 6.4
Subsequent recognition of obligations	Between 5.0 and 5.5	5.5	5.7 and 6.1

a) Inflation rates varying between 1.8% and 3.6% were used to determine the asset retirement obligations.

Note 13	Other Long-Term Liabilities
-------------------	-----------------------------

	Notes	2009	2008
Accrued benefit liabilities	21	705	663
Accounts payable		113	97
Balance of purchase price	16	30	–
		848	760

Note 14	Perpetual Debt
-------------------	----------------

Perpetual notes in the amount of \$303 million (US\$289 million) as at December 31, 2009, and \$355 million (US\$289 million) as at December 31, 2008, bear interest at a rate determined semiannually based on LIBOR, plus 0.0625%. They are redeemable at Hydro-Québec's option. No portion was redeemed in 2009 and 2008. Various derivative instruments recorded at fair value are used to mitigate the currency risk associated with this debt.

As at December 31, 2009 and 2008, the rates applicable to the perpetual notes were 0.8% and 3.6%, respectively. As at December 31, 2009, the fair value of these notes was \$255 million (\$246 million as at December 31, 2008). Fair value is obtained by discounting future cash flows, based on forward interest rates derived from interest rates at the close of business on the balance sheet date for similar instruments available on capital markets.

Note 15	Financial Instruments
-------------------	-----------------------

In the course of its operations, Hydro-Québec carries out transactions that expose it to certain financial risks, such as market, liquidity and credit risk. Exposure to such risks and the impact on operating results are significantly reduced through careful monitoring and implementation of strategies that include the use of derivative instruments.

Market risk

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate as a result of changes in market prices. Hydro-Québec is exposed to three main types of market risk: currency risk, interest rate risk and risk associated with the price of aluminum. Active integrated management of these three factors aims to limit their impact on operating results so that the mitigated risk is at an acceptable level.

Management of long-term risk

MANAGEMENT OF RISK ASSOCIATED WITH SALES IN U.S. DOLLARS

Currency risk – Hydro-Québec uses currency swaps and a portion of its U.S. dollar-denominated debt to manage currency risk associated with probable U.S.-dollar sales, designating them as cash flow hedges. The impact of these hedging transactions on operating results is recognized in Revenue. Hydro-Québec regularly assesses the probability of realizing future sales denominated in U.S. dollars.

MANAGEMENT OF RISK ASSOCIATED WITH LONG-TERM DEBT

Currency risk and interest rate risk – Hydro-Québec uses currency swaps to manage the currency risk associated with long-term debt and interest rate swaps to modify long-term exposure to interest rate risk. When designated as hedging items, these derivative instruments are recognized as cash flow hedges or fair value hedges, depending on the risk hedged. The impact on operating results of foreign currency hedging transactions and those associated with long-term debt interest rates is recognized in Financial expenses.

The following table shows the notional amounts of swaps used to manage risk associated with U.S.-dollar sales and long-term debt, expressed in Canadian dollars and other currencies:

Maturity						2009 ^a	2008 ^a
	1 to 5 years	6 to 10 years	11 to 15 years	16 to 20 years	More than 20 years	Total	Total
Swaps							
Canadian dollars	1,236	(705)	(3,604)	(2,122)	(1,271)	(6,466)	(8,017)
U.S. dollars	(197)	312	3,055	1,675	1,000	5,845	5,660
Other currencies

Euros	–	61	–	–	–	61	61
Pounds sterling	40	200	–	–	–	240	240

a) Figures in parentheses represent amounts to be paid.

The following table shows the fair value of swaps used to manage risk associated with U.S.-dollar sales and long-term debt, expressed in Canadian dollars:

	2009	2008
Instruments designated as cash flow hedges for U.S.-dollar sales ^a	441	452
Instruments designated as cash flow hedges for debt	(1,684)	(36)
Instruments designated as fair value hedges for debt	(129)	104
	(1,372)	520
Instruments not designated as hedges ^b	1,182	(695)
	(190)	(175)

a) A portion of the long-term debt, with a nominal amount of US\$1,403 million as at December 31, 2009 (US\$1,437 million as at December 31, 2008), was also designated as a cash flow hedge for U.S.-dollar sales.

b) Transactions carried out as part of Hydro-Québec's risk management, including \$977 million in consideration of amounts received or disbursed with respect to credit risk mitigation agreements in 2009 (\$852 million) in 2008.

Management of short-term risk

Currency risk – Hydro-Québec uses options and forward contracts to manage its foreign currency risk exposure over the short term. When designated as hedging items, these derivative instruments are recognized as cash flow hedges. The impact of currency risk hedging transactions on operating results is recognized in the line item corresponding to the hedged item, namely Revenue, Electricity and fuel purchases, or Financial expenses. The nominal amount of the open positions as at December 31, 2009, was US\$625 million, with US\$923 million in sales contracts and US\$298 million in purchase contracts (US\$258 million as at December 31, 2008, that is, US\$310 million in sales contracts and US\$52 million in purchase contracts).

Interest rate risk – Hydro-Québec uses options, interest rate swaps and forward rate agreements to manage short-term interest rate risk. When designated as hedging items, these derivative instruments are recognized as cash flow hedges. The impact on operating results of transactions to hedge short-term interest rate risk is recognized in Financial expenses.

Market risk – Hydro-Québec uses mainly options, swaps and commodity futures to manage risk resulting from fluctuations in energy and aluminum prices. When designated as hedging items, these derivative instruments are recognized as cash flow hedges. The impact on operating results of transactions to hedge the risk of variability in energy and aluminum prices is recognized in the line item corresponding to the hedged item, namely Revenue. Hydro-Québec regularly assesses the probability of realizing these transactions. To hedge exposure to variability in energy and aluminum prices, Hydro-Québec has traded derivative instruments for which open positions as at December 31, 2009, totaled 244,900 tonnes of aluminum (152,625 tonnes as at December 31, 2008); electricity swaps for which open positions as at December 31, 2009, were 10.3 TWh (3.5 TWh as at December 31, 2008); and natural gas futures for which open positions as at December 31, 2009, were 17.2 million MBtu (nil as at December 31, 2008).

The following table presents the fair value of derivative instruments used to manage short-term financial risk, depending on whether or not they are designated as hedges:

	2009	2008
Instruments designated as cash flow hedges	43	295
Instruments not designated as hedges	18	(2)
	61 ^a	293 ^a

a) Of which \$3 million (\$1 million in 2008) corresponds to the total of financial instruments measured on the basis of quoted market prices (Level 1) and \$58 million (\$292 million in 2008) to instruments measured through techniques based on observable market inputs (Level 2).

Effect of hedges

EFFECT OF HEDGES ON OPERATING RESULTS

EFFECT OF CASH FLOW HEDGES

As at December 31, 2009, the net loss related to the ineffectiveness of cash flow hedges recognized in operations totaled \$12 million (\$15 million as at December 31, 2008).

As at December 31, 2009, Hydro-Québec estimated at \$337 million the amount of net gains presented in Accumulated other comprehensive income that would be reclassified to operations in the next 12 months (\$401 million as at December 31, 2008).

In 2009, Hydro-Québec reclassified a net gain of \$6 million from Accumulated other comprehensive income to operations (no amount reclassified in 2008) as a result of the discontinuance of cash flow hedges.

As at December 31, 2009, the maximum period over which Hydro-Québec hedged its exposure to the variability of future cash flows for anticipated transactions was 7 years (8 years as at December 31, 2008).

EFFECT OF FAIR VALUE HEDGES

As at December 31, 2009, the net gain related to the ineffectiveness of fair value hedges recognized in operations totaled \$16 million (net loss of \$25 million as at December 31, 2008).

EFFECT OF REVALUATION OF DERIVATIVE INSTRUMENTS NOT DESIGNATED AS HEDGES

As at December 31, 2009, the net gain recognized in operations as a result of the revaluation, at fair value, of derivative instruments not subject to hedge accounting totaled \$4 million (\$143 million as at December 31, 2008). These instruments are essentially related to risk management transactions.

SENSITIVITY ANALYSES

The risks associated with variability in foreign exchange rates, interest rates and aluminum prices are the subject of integrated management aimed at limiting the impact of such risks on operating results. Most of the derivative instruments traded are designated as cash flow hedges or fair value hedges and therefore reduce the volatility in operating results, except for the ineffective portion of the hedges, which is insignificant. Derivative instruments which are not designated as hedges, but which nonetheless serve to hedge at-risk opposite positions, also reduce the volatility in operating results. The sensitivity of operating results is thus limited to net exposure to unhedged risks.

As at December 31, 2009, had the exchange rate (\$C/\$US) been 5% higher or lower, net income would have been \$19 million higher or lower, respectively (\$17 million higher or \$7 million lower as at December 31, 2008), while Other comprehensive income would have been \$11 million lower or higher, respectively (\$100 million higher or \$104 million lower as at December 31, 2008). The analysis is based on financial assets and liabilities denominated in U.S. dollars, including a cash amount of US\$82 million (US\$80 million as at December 31, 2008). It also takes into account the impact of hedged sales.

In 2009, had interest rates been 50 basis points higher or lower, net income would have been \$11 million lower or higher, respectively (\$2 million in 2008), while Other comprehensive income would have been \$72 million higher or \$77 million lower (\$3 million higher or \$4 million lower in 2008).

In 2009, had the price of aluminum been 5% higher or lower, net income would have been \$1 million higher or lower, respectively (\$3 million in 2008), taking into account the impact of hedged sales, and Other comprehensive income would have been \$29 million lower or higher, respectively (\$15 million in 2008).

Liquidity risk

Liquidity risk is the risk that Hydro-Québec will have difficulty meeting commitments related to its financial liabilities.

Hydro-Québec's exposure is reduced by a large volume of cash from operations, a diversified portfolio of highly liquid or readily convertible instruments traded with high-quality counterparties, preauthorized capital resources, the quality of Hydro-Québec's signature on financial markets, diversified capital resources and its management of the proportions of variable-rate debt and debt repayable in foreign currency.

In addition, as at December 31, 2009, \$36,518 million in long-term debt, perpetual debt and borrowings was guaranteed by the Québec government (\$34,881 million as at December 31, 2008).

Acquisition

On December 9, 2009, Hydro-Québec acquired, through its subsidiary HQ Manicouagan inc., a 60% interest in Manicouagan Power Limited Partnership, which owns and operates a hydroelectric generating station on the Rivière Manicouagan, for a consideration of \$616 million, including cash, a balance of purchase price and acquisition fees. Hydro-Québec has consequently acquired joint control over this limited partnership with Alcoa Ltd, which has a 40% interest, because under a contractual agreement, major operating, investment and financing decisions must be approved by all the directors. The transaction was accounted for using the purchase method.

The purchase price is broken down as follows:

Current assets	9
Property, plant and equipment	373
Water-power rights	282
	664
Current liabilities	47
Long-term liabilities	1
	48
Purchase price	616

Consideration consists of:

Cash	580
Balance of purchase price	30
Acquisition fees	3
Other	3
	616

Disposal

In 2008, Hydro-Québec recognized a gain of \$121 million, net of \$26 million in related income taxes, for the price adjustment provided for in the contract for the sale of its interest in HQJ Transelec Chile S.A. (Transelec). This adjustment was made following the ministerial order issued on January 15, 2008, establishing the value of the regulated trunk transmission asset base of Transelec. The retrospective effect of this revised valuation on Transelec's revenue for the period from March 13, 2004, to June 30, 2006, resulted in an additional \$5-million adjustment of the selling price, net of \$1 million in related income taxes. This transaction is presented as a discontinued operation in the Consolidated Statements of Operations and the Consolidated Statements of Cash Flows.

For purposes of segmented information, the results of foreign holdings are classified under Corporate and Other Activities.

The proportionate share of the joint venture items included in the consolidated financial statements is presented in the following table. These joint ventures consist of the interests managed by Groupe de la technologie and Hydro-Québec Production.

	2009 ^a	2008
Operations		
Revenue	14	26
Expenditure and financial expenses	11	30
Net income (loss)	3	(4)
Balance Sheets		
Current assets	16	9

Current liabilities	45	9
Long-term liabilities	25	35
Net assets	624	-
Cash Flows		
Operating activities	3	-
Investing activities	-	(2)
Financing activities	(10)	(3)
Net change in cash and cash equivalents	(7)	(5)

a) Hydro-Québec's share in the balance sheet, operations and cash flows of Manicouagan Power Limited Partnership has been included in the consolidated financial statements since the acquisition date, December 9, 2009. Information concerning this acquisition is presented in Note 16, Acquisition and Disposal of Interests.

Share capital

The authorized share capital consists of 50,000,000 shares with a par value of \$100 each, of which 43,741,090 shares were issued and paid up as at December 31, 2009 and 2008.

Retained earnings

Under the *Hydro-Québec Act*, the dividends to be paid by Hydro-Québec are declared once a year by the Québec government, which also determines the terms and conditions of payment. For a given financial year, they cannot exceed the distributable surplus, equal to 75% of the year's net operating revenue and net investment income, less interest on debt securities and amortization of debt premiums, discounts and issue expenses. This calculation is based on the consolidated financial statements.

However, in respect of a given financial year, no dividend may be declared in an amount that would have the effect of reducing the capitalization rate to less than 25% at the end of the year. The Québec government declares the dividends for a given year within 30 days after Hydro-Québec has sent it the financial data related to the distributable surplus. Upon expiry of the prescribed period, all or a portion of the distributable surplus that has not been subject to a dividend declaration may no longer be distributed to the shareholder as a dividend.

For 2009, the Québec government declared dividends of \$2,168 million (\$2,252 million in 2008).

ACCUMULATED OTHER COMPREHENSIVE INCOME

	2009

Hydro-Québec manages its capital in such a way as to meet its shareholder's expectations, safeguard its funds at all times and sustain its growth. It fosters a management environment allowing it to enhance the long-term value of its assets and equity, ensure its financial sustainability, preserve its financing capability and safeguard its funds and securities.

In addition to equity, capital includes long-term debt, perpetual debt, short-term borrowings and derivative instruments.

Hydro-Québec uses its capitalization rate to monitor its capital structure. It aims to maintain capitalization at no less than 25%.

CAPITALIZATION

	2009	2008
Equity	22,395	22,062
Long-term debt, including current portion	37,699	36,060

Hydro-Québec's pension plan (the "Pension Plan") is a funded plan that ensures pension benefits based on the number of years of service and an average of the best five years of earnings. These benefits are indexed annually based on a rate which is the greater of the inflation rate, up to a maximum of 2%, and the inflation rate less 3%.

Hydro-Québec also offers other post-retirement and post-employment benefits. Post-retirement benefits are provided by group life, medical and hospitalization insurance plans, which are contributory plans with contributions adjusted annually. Post-employment benefits are under non-contributory salary insurance plans, which pay short- and long-term disability benefits. Most of these plans are not funded,

with the exception of the long-term disability salary insurance plan, which is fully funded, and the supplementary group life insurance plan, which is partially funded.

Hydro-Québec's employee benefit plans are defined-benefit plans. The accrued benefit obligations of these plans, valued by independent actuaries, and assets, at fair value, are valued as at December 31 of each year. The most recent actuarial valuation for funding of the Pension Plan was as at December 31, 2008, and the next valuation, to be dated December 31, 2009, is currently in progress.

The following table presents information concerning Hydro-Québec's employee future benefit plans:

	Pension Plan		Other plans	
	2009	2008	2009	2008
Accrued benefit obligations				
Balance, beginning of year	10,208	12,607	773	929

Accrued benefit assets (liabilities)	1,736	1,133	(705)	(663)

In 2008, some amendments were made to the Pension Plan following agreements reached between Hydro-Québec and its unions. These amendments, which came into force on January 1, 2009, concern temporary and permanent provisions. The main temporary provisions concern retirement without pension reduction and the bridging benefit, whereas the main permanent provisions apply to the cost of optional pension forms and the broadening of the definition of the

surviving spouse upon a retiree's death. Amendments to the funding rules of the Pension Plan were also adopted under these agreements. As a result, in 2009, the employee and employer contribution rates were 6.0% and 6.9%, respectively. These rates will be increased annually by 0.5% and 0.9% until they reach up to 7.5% and 10.5% of pensionable earnings in 2013.

Additional disclosures with respect to plan assets

At year end, assets of the plans at fair value consisted of:

%	Pension Plan		Other plans	
	2009	2008	2009	2008
Bonds	54	54	100	91
Equities	33	32	-	-
Real estate investments	8	10	-	-
Short-term investments	3	4	-	-
Other	2	-	-	9
	100	100	100	100

Assets of the plans include the following securities issued by Hydro-Québec and the Québec government:

	Pension Plan		Other plans	
	2009	2008	2009	2008
Bonds	1,626	1,359	64	56

Cash payments

Cash payments made by Hydro-Québec for employee benefit plans consist of the contributions paid to the funded plans and the benefits paid to employees and pensioners under unfunded plans. The cash payment details are as follows:

	2009	2008
Contributions by Hydro-Québec		
Pension Plan	665	440
Other funded plans	14	11
Benefit payments		
Unfunded plans	43	41
Cash payments	722	492

In compliance with the actuarial valuation for funding purposes as at December 31, 2008, Hydro-Québec made a current contribution of \$295 million in 2009, including an additional contribution of \$186 million, to cover the current service cost, and a special contribution of \$370 million to cover part of the unfunded actuarial liability. In 2008, Hydro-Québec had made a current contribution of \$291 million, including an additional contribution of \$208 million, to cover the current service cost, and a special contribution of \$149 million to cover the entire unfunded actuarial liability established by the

actuarial valuation as at December 31, 2007. The special contribution for 2009 takes into account certain temporary relief measures introduced by *An Act to amend the Supplemental Pension Plans Act and other legislative provisions in order to reduce the effects of the financial crisis on plans covered by the Act*, assented to on January 15, 2009, and, in particular, the extension of the period to cover the unfunded actuarial liability established as at December 31, 2008. The regulation for application of this act came into force on November 26, 2009.

ELEMENTS OF ACCRUED BENEFIT COST RECOGNIZED FOR THE YEAR

	Pension Plan		Other plans	
	2009	2008	2009	2008
Current service cost ^a	161	285	37	42
Administrative fees ^b	30	31	1	–
Interest on obligations	760	712	51	51
Actual return on plan assets	(1,713)	2,434	(2)	(2)
Actuarial losses (gains)	2,046	(3,138)	81	(198)
Amendments to the Pension Plan	–	168	–	–
Cost (credit) before adjustments required to recognize the long-term nature of employee future benefits	1,284	492	168	(107)
Difference between actual and expected return on assets	926	(3,237)	–	–
Difference between actuarial losses (gains) on accrued benefit obligations and actuarial losses (gains) recognized	(2,046)	3,150	(82)	207
Difference between amendments to the Pension Plan and amortization of past service cost	50	(118)	–	–
Amortization of transitional (asset) obligation	(152)	(152)	13	14
	(1,222)	(357)	(69)	221
Cost recognized for the year	62	135	99	114

a) For the long-term disability salary insurance plan, the current service cost corresponds to the cost of new disability cases for the year.

b) Administrative fees billed to the Pension Plan by Hydro-Québec amounted to \$13 million in 2009 (\$12 million in 2008).

Significant actuarial assumptions

The following actuarial assumptions, used to determine the accrued benefit obligations and cost of the plans, result from a weighted average:

%	Pension Plan		Other plans	
	2009	2008	2009	2008
Accrued benefit obligations				
Rate at end of year				
Discount rate	6.17	7.49	6.17	7.49
Salary escalation rate ^a	2.97	2.86	–	–
Accrued benefit cost recognized				
Rate at end of prior year				
Discount rate	7.49	5.53	7.49	5.53
Expected long-term rate of return on plan assets	6.25	6.25	3.72	3.81
Salary escalation rate ^a	2.86	3.26	–	–

a) This rate takes salary increases into account as well as promotion opportunities while in service.

As at December 31, 2009, health care costs were based on an annual growth rate of 7.80% for 2010. Thereafter, based on the assumption used, this rate will gradually decrease until it ultimately reaches 4.60% in 2018. A change of 1% in this annual growth rate would have had the following impact for 2009:

	1% increase	1% decrease
Impact on current service cost and interest cost on accrued benefit obligations for the year	4	(3)
Impact on accrued benefit obligations at end of year	42	(34)

Electricity purchases

On May 12, 1969, Hydro-Québec signed a contract with Churchill Falls (Labrador) Corporation Limited [CF(L)Co] whereby Hydro-Québec undertook to purchase substantially all the output from Churchill Falls generating station, which has a rated capacity of 5,428 MW. Expiring in 2016, this contract will be automatically renewed for a further 25 years under agreed-upon terms and conditions. On June 18, 1999, Hydro-Québec and CF(L)Co entered into a contract to guarantee the availability of 682 MW of additional power until 2041 for the November 1 to March 31 winter period.

As at December 31, 2009, Hydro-Québec was committed under 123 contracts to purchase electricity from other power producers, for an installed capacity of about 5,430 MW. It expects to purchase approximately 20 TWh of energy annually over the terms of these contracts, which extend through 2045. The majority of these contracts include renewal clauses.

Hydro-Québec expects to make the following minimum payments on all its electricity purchase contracts over the next five years:

2010	677
2011	797
2012	1,013
2013	1,252
2014	1,435

Guarantees

Hydro-Québec grants guarantees to third parties for indemnification purposes in connection with its energy-related transactions on markets outside Québec. These guarantees are issued under long-term agreements and agreements governing its involvement in organized markets. These markets require that each participant provide guarantees enabling it to meet its obligations in the event of a default of payment by another participant. Hydro-Québec also grants guarantees as part of its international operations and in the field of electrotechnology.

As at December 31, 2009, the potential maximum amount Hydro-Québec could have had to pay under letters of credit or guarantees provided as security totaled \$395 million. Of this amount, \$293 million was related to energy purchases. Guarantees amounting to \$151 million will expire between 2010 and 2018, while others totaling \$244 million do not have maturity dates.

In accordance with the terms and conditions of certain debt securities issued outside Canada, Hydro-Québec has undertaken to increase the amount of interest paid to non-residents in the event of changes to Canadian tax legislation governing the taxation of non-residents' income. Hydro-Québec cannot estimate the maximum amount it might have to pay under such circumstances. Should an amount become payable, Hydro-Québec has the option of redeeming most of the securities in question. As at December 31, 2009, the amortized cost of these debts was \$4,298 million.

Under the contract signed on May 12, 1969, with CF(L)Co, Hydro-Québec could be required to provide additional funding if CF(L)Co were unable to pay its expenses and service its debt. The maximum amount that Hydro-Québec could be required to pay cannot be reasonably evaluated, however, since it is not stated in the contract and since the amount payable would depend on the outcome of future events whose nature and probability cannot be determined. To date, Hydro-Québec has not had to pay any amount under this contract.

As part of the implementation of the plan to capitalize on its interests abroad, which ended in 2008, Hydro-Québec provided guarantees to the purchasers of its interests with regard to contingent tax liabilities and certain other customary representations. These guarantees, for which no liability was recognized, will be in effect until the applicable limitation periods expire, namely until June 30, 2013.

Investments

Hydro-Québec expects to invest approximately \$4.5 billion in property, plant and equipment and intangible assets in 2010.

Litigation

In the normal course of its development and operating activities, Hydro-Québec is sometimes party to claims and legal proceedings. Management is of the opinion that adequate provisions have been made for any disbursements that could result from these legal actions. Consequently, it does not foresee any adverse effect of such contingent liabilities on Hydro-Québec's consolidated operating results or financial position.

Hydro-Québec enters into various business transactions, including electricity sales, with the Québec government and its agencies, as well as with other government corporations in the normal course of business. These business transactions are measured at the exchange amount.

The main transactions, other than electricity sales, as well as the balances owing to related parties or owed by them, are as follows:

	2009	2008
Québec government		
Accounts receivable	3	5
Accounts payable	35	26
Water-power royalties	567	546
Public utilities tax	188	302
Capital tax	132	202
Guarantee fees	174	167
Significantly influenced enterprises		
Accounts receivable	6	–
Accounts payable	16	9
Electricity purchases	83	98

Hydro-Québec carries on its activities in the four reportable business segments defined below. The non-reportable business segments and other activities are grouped together under Corporate and Other Activities for reporting purposes.

Generation: Hydro-Québec Production operates and develops Hydro-Québec's generating facilities. This division also sells electricity on external markets and engages in energy trading. Hydro-Québec Production provides Hydro-Québec Distribution with a base volume of up to 165 TWh of heritage pool electricity annually at an average price of 2.79¢/kWh. In excess of this volume, it can participate in Hydro-Québec Distribution's calls for tenders in a context of free market competition.

Transmission: Hydro-Québec TransÉnergie operates and develops Hydro-Québec's power transmission system. It markets system capacity and manages power flows throughout Québec.

Distribution: Hydro-Québec Distribution operates and develops Hydro-Québec's distribution system and is responsible for sales and services to Québec customers. It also promotes energy efficiency and ensures the security of the supply of electricity to the Québec market.

Construction: Hydro-Québec Équipement carries out engineering, construction and refurbishment work related to hydroelectric development projects throughout Québec, except on the territory governed by the *James Bay and Northern Québec Agreement*, where Société d'énergie de la Baie James assumes this responsibility. Hydro-Québec Équipement also builds power transmission lines and substations throughout the province.

Corporate and Other Activities: The corporate units support the divisions in the achievement of their business objectives. They include Groupe de la technologie, Groupe des affaires corporatives et du secrétariat général, Groupe des ressources humaines et des services partagés, Vice-présidence à la comptabilité et au contrôle and Vice-présidence au financement, à la trésorerie et à la caisse de retraite. The Centre de services partagés brings together internal company-wide shared services including goods and services procurement, real estate management, and material and transportation service management.

The amounts presented for each segment are based on the financial information used to prepare the consolidated financial statements. The accounting policies used to calculate these amounts are as described in Notes 1 and 3.

Intersegment transactions related to electricity sales are recorded based on the supply and transmission rates provided for by the *Act respecting the Régie de l'énergie*. The Act sets a commodity rate for an annual base volume of up to 165 TWh of heritage pool electricity for the Québec market.

Other intersegment products and services are measured at full cost.

Most of Hydro-Québec's revenue is from Québec, and substantially all its property, plant and equipment, as well as its goodwill, are related to its Québec operations. In 2009, revenue from outside Québec amounted to \$1,610 million, with \$1,311 million coming from the U.S. (\$2,099 million and \$1,776 million, respectively, in 2008).

OPERATIONS AND ASSETS BY SEGMENT

a) Resales of excess supply by Hydro-Québec Distribution on outside markets are presented as offsets of electricity purchases rather than in Revenue.

b) In 2009, Hydro-Québec revised its method for allocating financial expenses. Figures for 2008 have been reclassified to conform to the presentation adopted in the current year.

Some of the prior year's data have been reclassified to conform to the presentation adopted in the current year.

Among its decisions in 2009, the Board authorized the Romaine project, in the Minganie region. This will be the largest construction site in Canada. A railway bridge spans the river at Chute de l'Église, a waterfall 16 km from the mouth.

BOARD OF DIRECTORS

Hydro-Québec's Board of Directors is made up of 16 members, including the Chairman of the Board and the President and Chief Executive Officer. The directors' diverse professional backgrounds are a definite asset for the seven Board committees: Executive, Governance and Ethics, Audit, Human Resources, Environment and Public Affairs, Finance, and Pension Plan Financial Management. The Board is chaired by Michael Turcotte.

Mandate: The Board administers the company's business efficiently, in accordance with the *Hydro-Québec Act*, the *Companies Act* and the applicable regulations. Its principal functions include reviewing and approving the Strategic Plan and the annual Business Plan, setting the company's annual performance targets, reviewing financial results on a monthly basis, and performing the cyclical review of integrated enterprise risk management. It also approves the appointment of executives other than the President and Chief Executive Officer and the policies governing compensation and working conditions for Hydro-Québec's employees and executives. In addition, it approves the company's major capital projects in generation, transmission and distribution as well as matters submitted to the Régie de l'énergie.

Activities: *The Board met 14 times in 2009, while its committees held 35 meetings in all. It approved the Strategic Plan 2009–2013 based on detailed presentations given by Management on the company's sales forecasts and supply strategies for all its markets; issues pertaining to its generation, transmission and distribution activities; and the principal risks it must manage. The Board also examined the expertise and experience profiles established for the selection of new directors, reviewed the mandates of its committees and assessed its own performance.*

The Board's decisions in 2009 included its authorization of the Romaine hydroelectric complex and expansion of the transmission grid in northeastern Québec to integrate output from this complex, as well as other generation, transmission and distribution capital projects. It also approved the acquisition of AbitibiBowater's interest in the Manicouagan Power Company (which subsequently became the Manicouagan Power Limited Partnership), which owns and operates McCormick hydroelectric generating station. Moreover, the Board recommended that the Québec government sign a memorandum of understanding regarding the company's acquisition of some of the assets of NB Power.

The Board's recurring deliberations dealt with the quarterly and annual objectives and financial results of the company and certain wholly owned subsidiaries, as well as with the financial management of the pension plan. It reviewed the progress of the company's capital projects and examined the risk management process and consolidated enterprise risk portfolio. It also approved the annual internal audit plan and the external auditors' plan and fees in connection with the audit of the financial statements of the company and of the pension plan.

EXECUTIVE (A)

Mandate: The Executive Committee is vested with all of the powers of the Board of Directors, except those powers that are expressly reserved for the Board by law and under the company's bylaws. The Executive Committee, which meets only in emergencies, did not hold any meetings in 2009. It is chaired by Michael Turcotte.

GOVERNANCE AND ETHICS (B)

Mandate: The role of the Governance and Ethics Committee is to develop the rules of governance and codes of ethics applicable to directors, senior executives appointed by the company and employees of Hydro-Québec and its wholly owned subsidiaries; the expertise and experience profiles used in appointing Board members; the criteria for assessing the performance of directors and the Board's functioning; the induction and training program for directors; and the measures for evaluating the company's efficiency and performance. This committee also makes recommendations to the Board regarding the company's policies and Strategic Plan and the composition and mandate of the Board committees. The Governance and Ethics Committee is chaired by Michael Turcotte.

Activities: In 2009, the Governance and Ethics Committee met eight times, including one joint meeting with the Audit Committee. While carefully ensuring application of the governance measures in the Hydro-Québec Act, the Governance and Ethics Committee assessed the performance of the Board of Directors and reviewed the mandates of the Board committees and the expertise and experience profiles of the Board members. It also made recommendations concerning approval of the Strategic Plan 2009–2013, appointments to Board committees and updating of the Code of Ethics and Rules of Professional Conduct for Directors, Executives and Controllers of Hydro-Québec. In addition, it examined the Follow-Up to the Strategic Plan 2006–2010, as well as annual reviews of the company's policies.

Summary of the assessment of Board performance: In accordance with the Hydro-Québec Act, in 2009 the Governance and Ethics Committee assessed the performance of the Board of Directors. The directors completed a questionnaire based on the assessment criteria approved by the Board, to which the results were submitted.

AUDIT (C)

Mandate: The Audit Committee's role is to make recommendations to the Board of Directors on the approval of the financial statements of Hydro-Québec and of its pension plan. It ensures that the financial statements accurately reflect the financial positions and changes therein, and that internal controls are adequate and effective. It is also responsible for reviewing the relevance of its mandate on an annual basis, issuing an opinion prior to the Board's approval of the annual internal audit plan, supervising internal audit activities, ensuring that the company has a plan to optimize the use of its resources and monitoring this plan. The Audit Committee also makes recommendations to the Board on the external auditors' fees and meets periodically with the external auditors. In addition, it examines the integrated enterprise risk management process. It can also act as the audit committee of any of the company's wholly owned subsidiaries. The Audit Committee is composed solely of independent directors who have the necessary expertise for the performance of its mandate. It is chaired by Jacques Leblanc.

Activities: The Audit Committee held eight meetings in 2009, including a meeting with the Pension Plan Financial Management Committee and another meeting with the Governance and Ethics Committee. As part of its recurring deliberations, the committee ensured the independence of the external auditors. It also examined internal and external audit results and internal audit reports on control and optimization of the company's operations and resources as well as management of the related risks. It examined the quarterly and annual financial statements of Hydro-Québec and the annual financial statements of its pension plan, of Hydro-Québec International and of Société d'énergie de la Baie James. The committee also monitored progress in Hydro-Québec's migration to the International Financial Reporting Standards. Moreover, it examined the company's 2010 internal audit plan and recommended its approval by the Board. The plan addresses the effectiveness, efficiency and profitability of operations; the reliability, integrity and availability of financial and operational information; the protection of assets; and compliance of the company's activities with laws, regulations and its own guidelines. It specifically targets the optimization of the company's resources and the tracking of performance indicators.

HUMAN RESOURCES (D)

Mandate: The Human Resources Committee is responsible for establishing human resources policies as well as standards and rate scales applicable to the compensation of senior executives and employees of the company and its wholly owned subsidiaries. It is also responsible for developing the expertise and experience profile to be used in selecting the President and Chief Executive Officer and for proposing a candidate for that position to the Board of Directors, which will then make a recommendation to the government of Québec. In addition, it develops and suggests criteria for assessing the performance of the President and Chief Executive Officer and makes recommendations to the Board regarding his compensation. It also participates in selecting the senior executives of the company and its subsidiaries and in developing a succession plan. The committee is chaired by Marie-France Poulin.

Activities: In 2009, the Human Resources Committee held five meetings, including a joint meeting with the Finance Committee to examine Hydro-Québec's Business Plan, objectives and corporate risk management. It evaluated whether or not the company had met its annual performance objectives and examined the overall compensation of its employees, executives and President and Chief Executive Officer and of the employees and senior executives of its wholly owned subsidiaries. In addition, it closely monitored the succession plan for Senior Management. It also studied the Report of Activities of the Corporate Ombudsman 2008, examined the annual report on the corporate policy Our Human Resources and analyzed the results of the 2008 employee survey on job satisfaction and employee motivation.
